This document is and shall remain the property of GHD. The document may only be used for the purpose for which it was commissioned and in accordance with the Terms of Engagement for the commission. Unauthorised use of this document in any form whatsoever is prohibited.

# Executive Summary

GHD Limited is pleased to provide the following Traffic Impact Study for the proposed Joshua Creek North residential development generally located on the south side of Burnhamthorpe Road East and west of Ninth Line in the Town of Oakville.

This report determines the site related traffic and subsequent traffic related impacts on the adjacent road network and site driveways during the weekday a.m. and p.m. peak hours. These impacts are based on the projected future background traffic and road network conditions derived for a 2031 and 2036 future planning horizon year.

Based on the approved Terms of Reference for the study, the following intersections were included in the study area:

## Existing

- Trafalgar Road and Burnhamthorpe Road East
- Burnhamthorpe Road East and William Halton Parkway
- William Halton Parkway and Ninth Line

## Future

- Burnhamthorpe Road East and Street A
- Burnhamthorpe Road East and Street D
- Burnhamthorpe Road East and Street E
- Burnhamthorpe Road East and Street L
- Burnhamthorpe Road East and Street N (west leg)
- Burnhamthorpe Road East and Street N (east leg)
- Street C and Street D
- Street A/J and Street B/K

A Draft Plan of Subdivision for Joshua Creek North prepared by Korsiak Urban Planning consists of a total 556 dwelling units. The breakdown between each unit type is as follows:

- 382 single detached dwelling units
- 96 street townhouse dwelling units
- 78 rear lane townhouse dwelling units

Access to the Joshua Creek North lands is proposed via six new proposed roads, 3 of which are located on the west side of the Natural Heritage System and generally connect to the lands to the south with the 3 other roadways serving the portion of the lands east of the Natural Heritage System.

Based on ITE Trip Generation rates, the subject site is expected to generate a total of 306 two-way vehicle trips during the a.m. peak hour consisting of 76 inbound and 230 outbound trips. During the p.m. peak hour, it is expected to generate 400 new two-way vehicle trips consisting of 248 inbound and 152 outbound trips.

Under existing traffic conditions, all intersections are operating at acceptable v/c ratios and levels of service during the a.m. peak and p.m. peak hours. with the exception of:

- William Halton Parkway and Burnhamthorpe Road East
  - The northbound shared left/right-turn movement with a v/c ratio of 0.75 LOS E (a.m. peak hour)

Under the 2031 future background conditions, with the addition of corridor growth, background development traffic, and signal improvements, all intersections are operating at acceptable v/c ratios and levels of service during the a.m. peak and p.m. peak hours with the exception of:

- William Halton Parkway and Burnhamthorpe Road East
  - The northbound shared left/right-turn movement with a v/c ratio of 1.57 LOS F (a.m. peak hour) and 0.90 LOS F (p.m. peak hour)
- William Halton Parkway/Burnhamthorpe Road West and Ninth Line
  - The northbound approach with a v/c ratio of 1.03 LOS F (p.m. peak hour – 15% y-intercept)
  - The westbound approach with a v/c ratio of 0.98 LOS F (p.m. peak hour – 15% y-intercept)

Under the 2031 future total conditions, with the redistribution of some of the background development traffic and the addition of site traffic from the proposed development, all intersections are reported to continue to operate with acceptable v/c ratios and levels of service during the a.m. peak and p.m. peak hours with the exception of:

- Trafalgar Road and Burnhamthorpe Road East
  - The westbound left-turn movement with a v/c ratio of 0.97 LOS F (p.m. peak hour)
- William Halton Parkway and Burnhamthorpe Road East
  - The northbound shared left/right-turn movement with a v/c ratio of 2.71 LOS F (a.m. peak hour) and 1.30 LOS F (p.m. peak hour)
- William Halton Parkway/Burnhamthorpe Road West and Ninth Line
  - The eastbound approach with a v/c ratio of 1.06 LOS F (a.m. peak hour – 15% y-intercept)
  - The northbound approach with a v/c ratio of 1.14 LOS F (p.m. peak hour – 15% y-intercept)
  - The westbound approach with a v/c ratio of 1.07 LOS F (p.m. peak hour – 15% y-intercept)

Under the 2036 future background conditions, with the addition of corridor growth, background development traffic, and signal improvements, all intersections are operating at acceptable v/c ratios and levels of service during the a.m. peak and p.m. peak hours with the exception of:

- William Halton Parkway and Burnhamthorpe Road East
  - The northbound shared left/right-turn movement with a v/c ratio of 2.10 LOS F (a.m. peak hour) and 1.13 LOS F (p.m. peak hour)
- William Halton Parkway/Burnhamthorpe Road West and Ninth Line
  - The eastbound approach with a v/c ratio of 1.01 LOS F (a.m. peak hour – 15% y-intercept)
  - The northbound approach with a v/c ratio of 1.18 LOS F (p.m. peak hour – 15% y-intercept)
  - The westbound approach with a v/c ratio of 1.06 LOS F (p.m. peak hour – 15% y-intercept)

Under the 2036 future total conditions, with the redistribution of some of the background development traffic and the addition of site traffic from the proposed development, all intersections are reported to continue to operate with acceptable v/c ratios and levels of service during the a.m. peak and p.m. peak hours with the exception of:

- Trafalgar Road and Burnhamthorpe Road East
  - The overall intersection with a v/c ratio of 0.93 LOS C (p.m. peak hour)
  - The eastbound shared through/right-turn movement with a v/c ratio of 0.86 LOS E (a.m. peak hour)
  - The westbound left-turn movement with a v/c ratio of 0.97 LOS F (a.m. peak hour)
- William Halton Parkway and Burnhamthorpe Road East
  - The northbound shared left/right-turn movement with a v/c ratio of 3.42 LOS F (a.m. peak hour) and 1.57 LOS F (p.m. peak hour)
- William Halton Parkway/Burnhamthorpe Road West and Ninth Line
  - The eastbound approach with a v/c ratio of 1.19 LOS F (a.m. peak hour – 15% y-intercept)
  - The northbound approach with a v/c ratio of 1.31 LOS F (p.m. peak hour – 15% y-intercept) and 1.01 LOS F (p.m. peak hour – 0% y-intercept)

- The westbound approach with a v/c ratio of 1.15 LOS F (p.m. peak hour – 15% y-intercept) and 1.01 LOS F (p.m. peak hour – 0% y-intercept)

GHD completed a sensitivity analysis for the intersection of William Halton Parkway and Burnhamthorpe Road East to identify the required lane configuration and traffic controls under the future horizon years. The sensitivity analysis was completed with a four-lane cross-section along William Halton Parkway in addition to signalizing the intersection (with the four-lane cross-section and an exclusive westbound left-turn lane). It should be noted that the traffic volumes at both study intersections are significantly increased under the 2031 and 2036 horizon year due to corridor growth and the re-distribution of background development traffic. The Region should continue to monitor the operation of Regional roadways to determine when improvements become warranted. A signal warrant was also completed under Future Background 2031 conditions and confirmed that a traffic signal is warranted for the intersection of William Halton Parkway and Burnhamthorpe Road East.

Some TDM measures are proposed for the development including connected sidewalks and pathways, transit accessibility, TDM Education Campaigns and traffic calming measures to encourage residents to explore alternatives to reduce single-occupant vehicle trips.

Application of the Town of Oakville Zoning By-Law 2009-189 parking rates to the subject site results in a requirement of a minimum of 938 parking spaces. Each single and semi-detached dwelling unit will contain a minimum of two parking spaces (one in the garage and one in the driveway) while the townhouse dwelling units are proposed to contain at least one parking space, satisfying the Town's requirement.

A parking plan prepared for the subject site identified a total of 244 on-street visitor parking spaces are available to meet the Town's objectives.

The proposed roadway geometric elements were revised and confirmed that the right-of-way, daylight triangles, and corner clearances requirements have generally been met. The proposed intersections are also generally consistent with the road network set out in the Burnhamthorpe Road Study and Class EA.

Traffic calming measures and future transit routes have been planned for the subject site to enhance safety and connectivity. Curb bump-outs are proposed at key locations with anticipated higher pedestrian crossing volumes, such as near schools, parks, and community hubs, to improve visibility, reduce crossing distances, and slow vehicle speeds.

Transit routes and stops have been strategically identified in alignment with the North Oakville East Secondary Plan's Transportation Plan, ensuring connectivity to regional transit hubs and local destinations. These transit stops are designed to maximize accessibility and integrate with pedestrian and cycling infrastructure.

The traffic study concludes that the proposed residential development can be integrated into the existing and planned road network without causing significant impacts on traffic flow, capacity, or safety.

We trust that this satisfies your requirements, but do not hesitate to contact the undersigned if you have any questions.

Sincerely,

GHD

# 1. Introduction

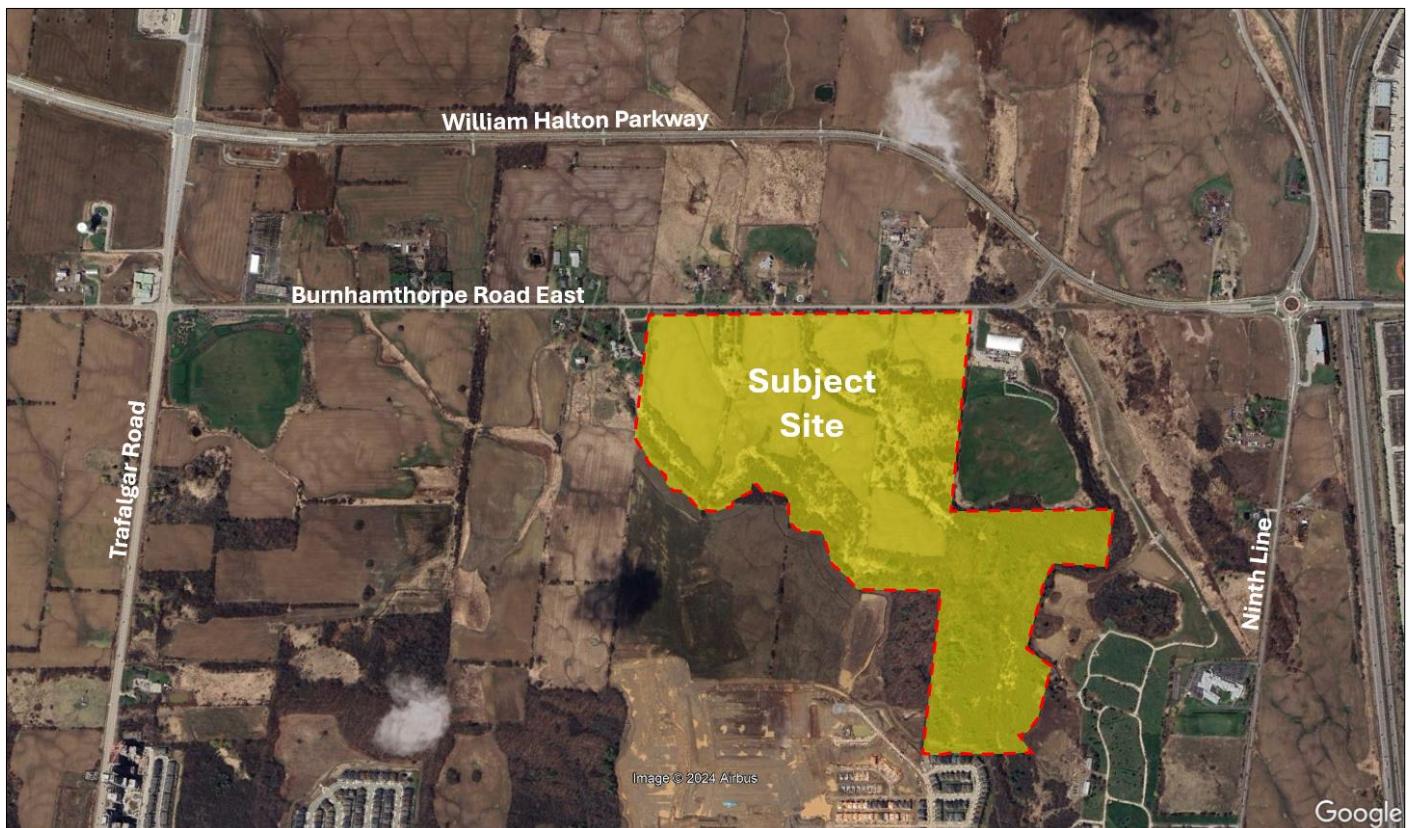

## 1.1 Retainer and Objective

GHD Limited was retained to prepare a Traffic Impact Study for a residential development on lands known as Joshua Creek North located south of Burnhamthorpe Road, east of Ninth Line in the Town of Oakville.

The site location is illustrated in **Figure 1**.

The purpose of this study is to:

- Establish baseline traffic conditions for the study area in 2024 and determine future background operating conditions for a future planning horizon in 2031 and 2036.
- Estimate the site trips generated by the proposed development and distribute the traffic to the adjacent road network.
- Determine future operating traffic conditions during the weekday peak periods through intersection capacity analysis.

**Figure 1**      *Site Location*

## 1.2 Study Team

The GHD team involved in the preparation of the study are:

- William Maria, P. Eng., Transportation Planning Lead
- Rafael Andrenacci, B.Eng., Transportation Planner

## 2. Site Characteristics

### 2.1 Study Area

As per the agreed Terms of Reference for the study attached in **Appendix A**, the following intersections were included in the study area:

- Existing
  - Trafalgar Road and Burnhamthorpe Road East
  - Burnhamthorpe Road East and William Halton Parkway
  - William Halton Parkway and Ninth Line
- Future
  - Burnhamthorpe Road East and Street A
  - Burnhamthorpe Road East and Street D
  - Burnhamthorpe Road East and Street E
  - Burnhamthorpe Road East and Street L
  - Burnhamthorpe Road East and Street N (west leg)
  - Burnhamthorpe Road East and Street N (east leg)
  - Street C and Street D
  - Street A/J and Street B/K

### 2.2 Proposed Development Content

A draft plan of subdivision prepared by Korsiak Urban Planning is shown in **Figure 2** and provided in **Appendix B**. The proposed development consists of a total 556 dwelling units. The breakdown between each unit type is as follows:

- 382 single detached dwelling units
- 96 street townhouse dwelling units
- 78 rear lane townhouse dwelling units

A Natural Heritage System divides the Joshua Creek 7 lands into two areas. Access to the east area is provided via three new roads intersecting with Burnhamthorpe Road East (Street L and both legs of Street N). Access to the west leg is similarly provided via three new roads (Street A, Street D, and Street E) in addition to two connections to the lands to the south (Street C and Street B) that provide further access to Wheat Boom Drive and Dundas Street East.

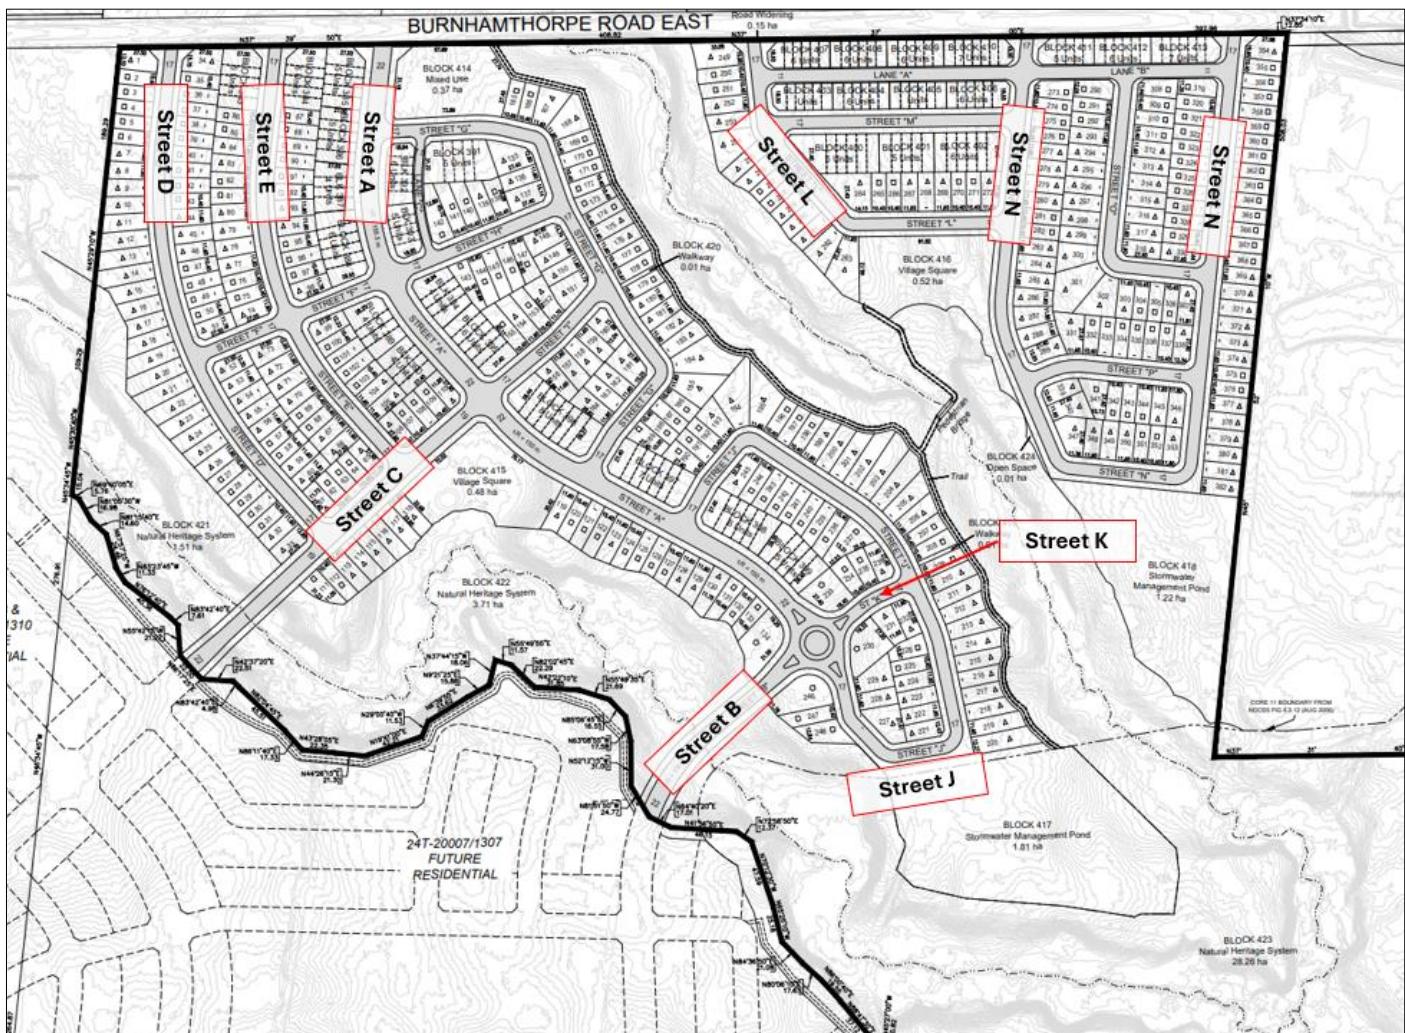

Figure 2 Draft Plan of Subdivision

### 3. Existing Conditions

#### 3.1 Existing Road Network

**Burnhamthorpe Road East** is an east/west Avenue/Transit Corridor road under the jurisdiction of the Town of Oakville. Within the study area it has a two-lane cross-section. Its intersection with Trafalgar Road is signalized with auxiliary left-turn lanes provided in the eastbound and westbound directions. Its intersection with William Halton Parkway is unsignalized with the stop-control only provided along the south approach. The posted speed limit along Burnhamthorpe is 60 km/h and reduced to 40 km/h within 230 metres of its intersection with William Halton Parkway.

**William Halton Parkway** is an east/west Major Arterial/Transit Corridor under the jurisdiction of Halton Region. Within the study area it has a two-lane cross-section which widens to a four-lane cross-section as it approaches the roundabout with Ninth Line. Its intersection with Burnhamthorpe Road East is unsignalized with the stop-control only provided along the south approach while its intersection with Ninth Line is a roundabout. The posted speed limit along William Halton Parkway is 60 km/h.

**Trafalgar Road** is a north/south Major Arterial/Transit Corridor under the jurisdiction of Halton Region. Within the study area it has a two-lane cross-section. Its intersection with Burnhamthorpe Road East is signalized with an

auxiliary left-turn lane in the northbound and southbound directions. The posted speed limit along Trafalgar Road is 80 km/h.

**Ninth Line** is a north/south Major Arterial/Transit Corridor under the jurisdiction of Halton Region. Within the study area it has a two-lane cross-section which widens to a four-lane cross-section as it approaches the roundabout intersection with William Halton Parkway. The posted speed limit along Ninth Line is 60 km/h.

The existing lane configurations and intersection control are shown in the figure below.

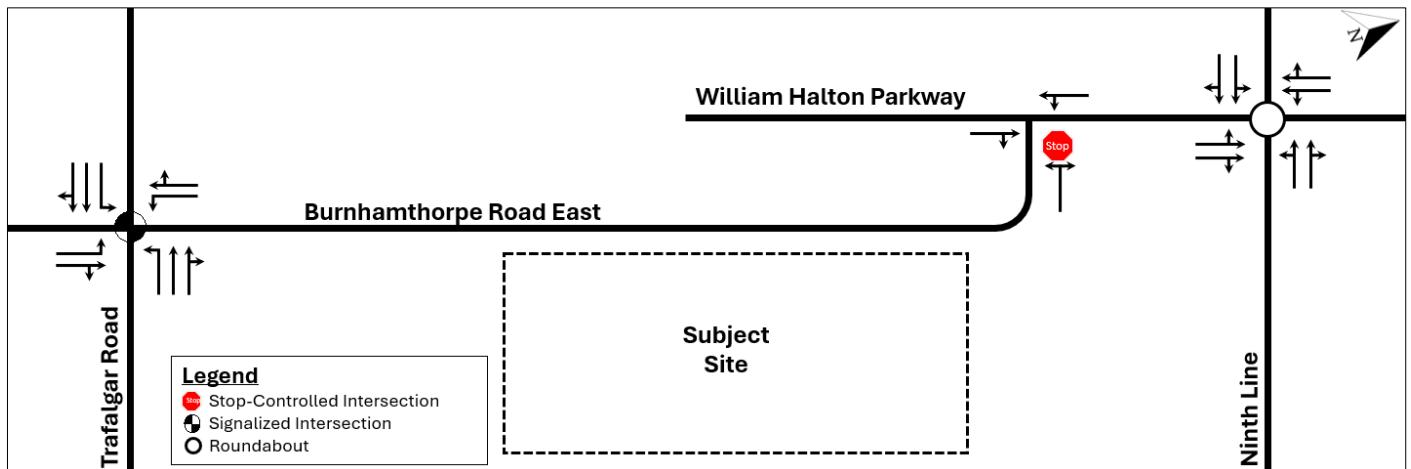

Figure 3 Existing Lane Configuration and Traffic Controls

## 3.2 Pedestrian and Bicycle Facilities

Within the study area, pedestrian and cycling infrastructure is generally provided only along William Halton Parkway and along Trafalgar Road and Ninth Line adjacent to William Halton Parkway

Pedestrian infrastructure is provided within the study area as follows:

- A sidewalk along the north side of William Halton Parkway only

Cycling infrastructure is provided within the study area as follows:

- A bike lane on both sides of William Halton Parkway

Multi-use paths are also provided within the study area as follows:

- Multi-use paths along both sides of Trafalgar Road adjacent to William Halton Parkway
- A multi-use path the south side of William Halton Parkway adjacent to Trafalgar Road
- Multi-use paths in the four quadrants of the William Halton Parkway and Ninth Line roundabout

The pedestrian and bicycle routes are illustrated in the figure below.

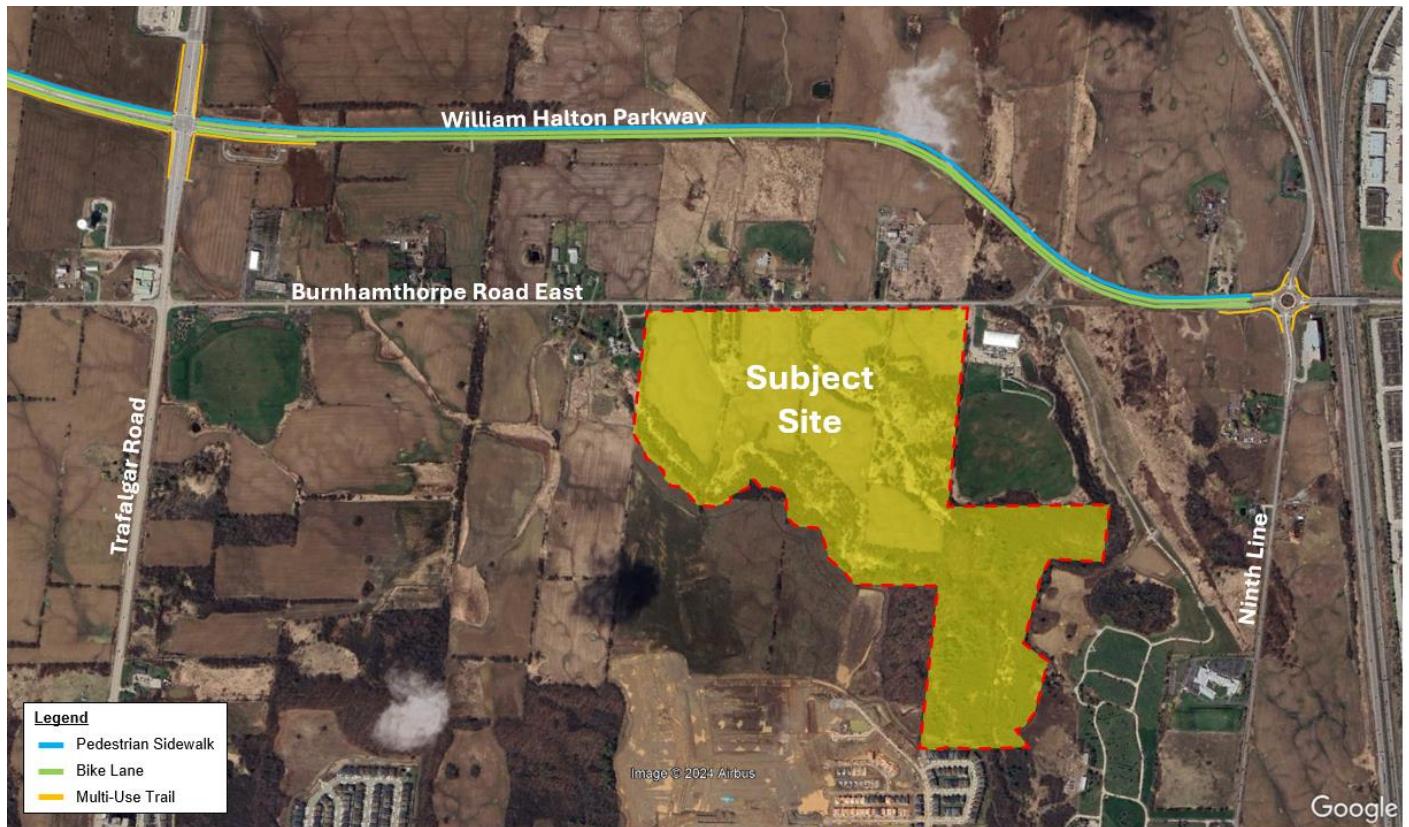

Figure 4 Existing Active Transportation Facilities

### 3.3 Transit Services

Oakville Transit currently offers transit service along Route 1 within the study area. Route 1 (**Trafalgar**) operates in the north/south direction along Trafalgar Road between the Oakville GO Station and the Trafalgar Road and Highway 407 Park & Ride lot. The nearest transit stop is located at the intersection of Trafalgar Road and Burnhamthorpe Road East with headways of 1-hour throughout the day.

GO Transit operates Routes 22 (**Milton/Oakville**) and 56 (**Oshawa/Oakville**) along Trafalgar Road within the study area. Route 22 operates between the Oakville and Milton GO Stations with headways of approximately 2 hours. Route 56 operates between the Oakville and Durham College Oshawa GO Stations, including stops at the Square One Bus Terminal, Bramalea GO Station, and Unionville GO Station, with headways of approximately 30 minutes throughout the day.

The existing transit routes and their transit stops within the study area are shown in the figure below.

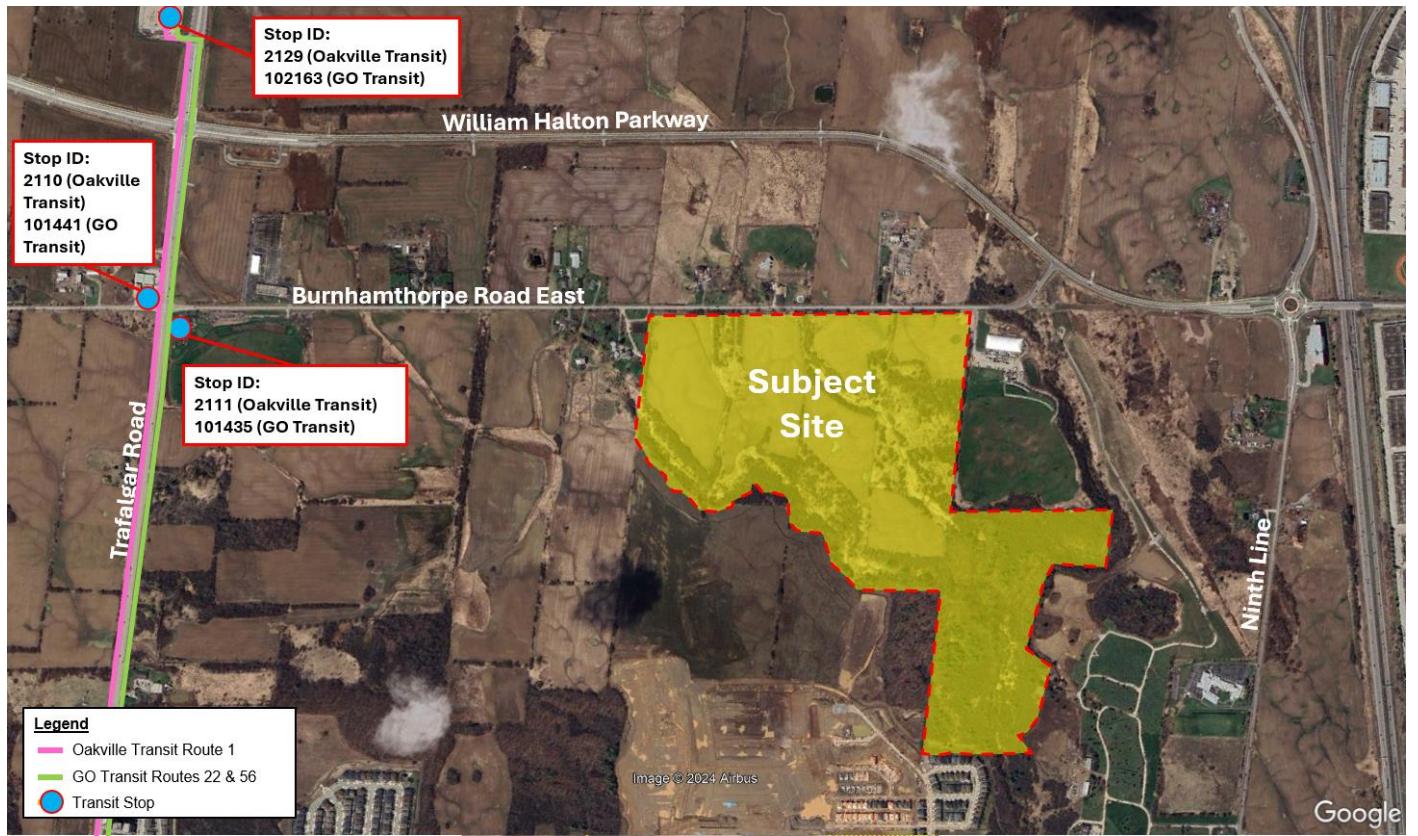

Figure 5 Existing Transit Routes and Transit Stops

### 3.4 Existing Traffic Data

GHD contracted Ontario Traffic Inc. to conduct updated turning movement counts at all existing study intersections in October 2024. The baseline 2024 traffic volumes for the a.m. and p.m. peak hours are summarized in **Figure 6** below with the full turning movement counts provided in **Appendix C**.

Signal timings were also provided by Halton Region and included in **Appendix C**.

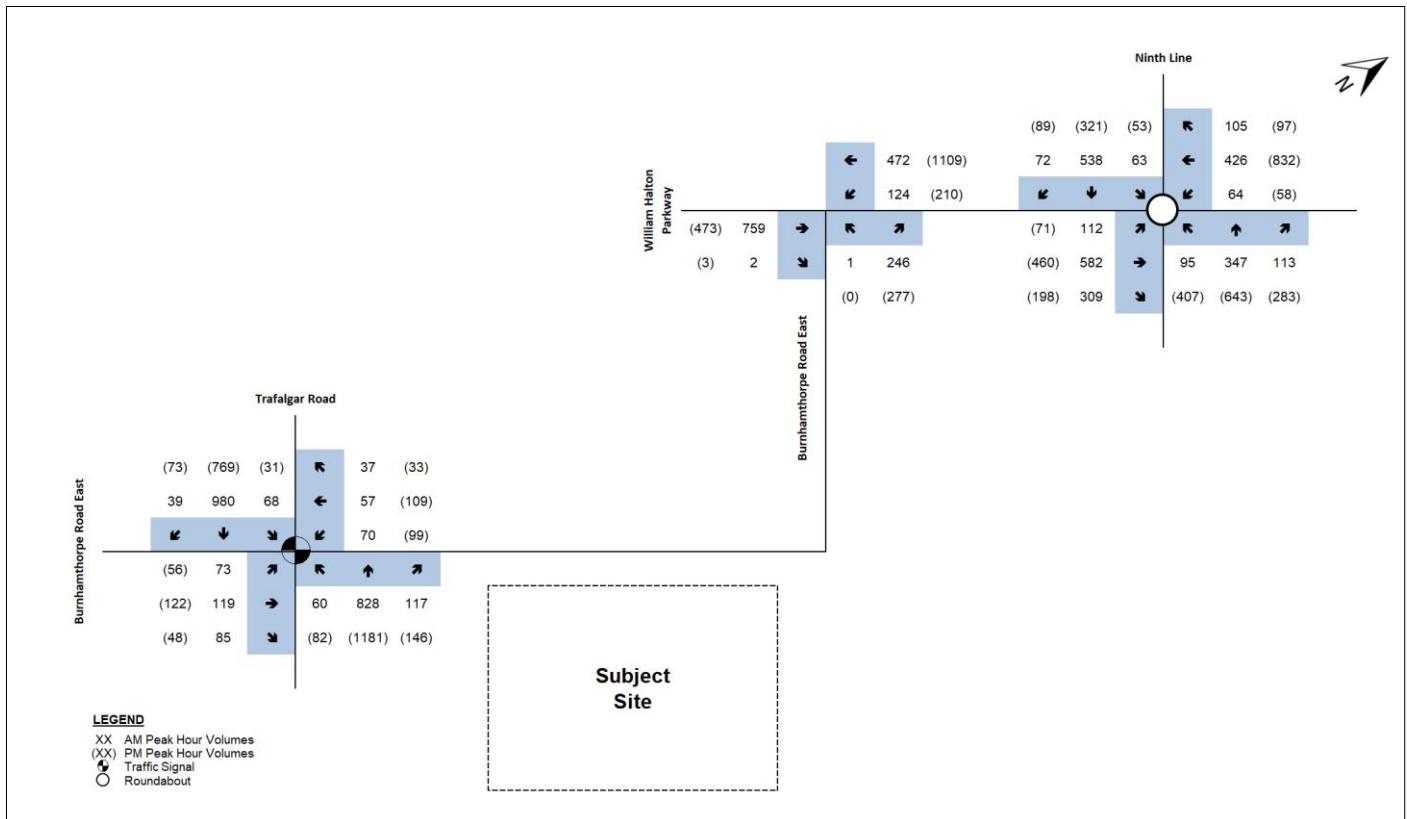

Figure 6 Baseline 2024 Traffic Volumes

## 4. Future Conditions

### 4.1 Study Horizon Year

Future horizon years of 2031 and 2036 were selected for the analysis of future traffic conditions, corresponding to the anticipated year of build-out and a period of five years post build-out as required by Town staff through the Terms of Reference.

### 4.2 Corridor Growth

The growth rates used to project the 2031 and 2036 traffic volumes were provided by Town staff, with a 3.5% per annum growth rate applied uniformly to all movements. As the Region did not provide specific growth rates, a 2% annual growth rate was applied to William Halton Parkway and Trafalgar Road to ensure consistency in projecting traffic volumes with Traffic Impact Studies completed for surrounding developments.

### 4.3 Background Development Traffic

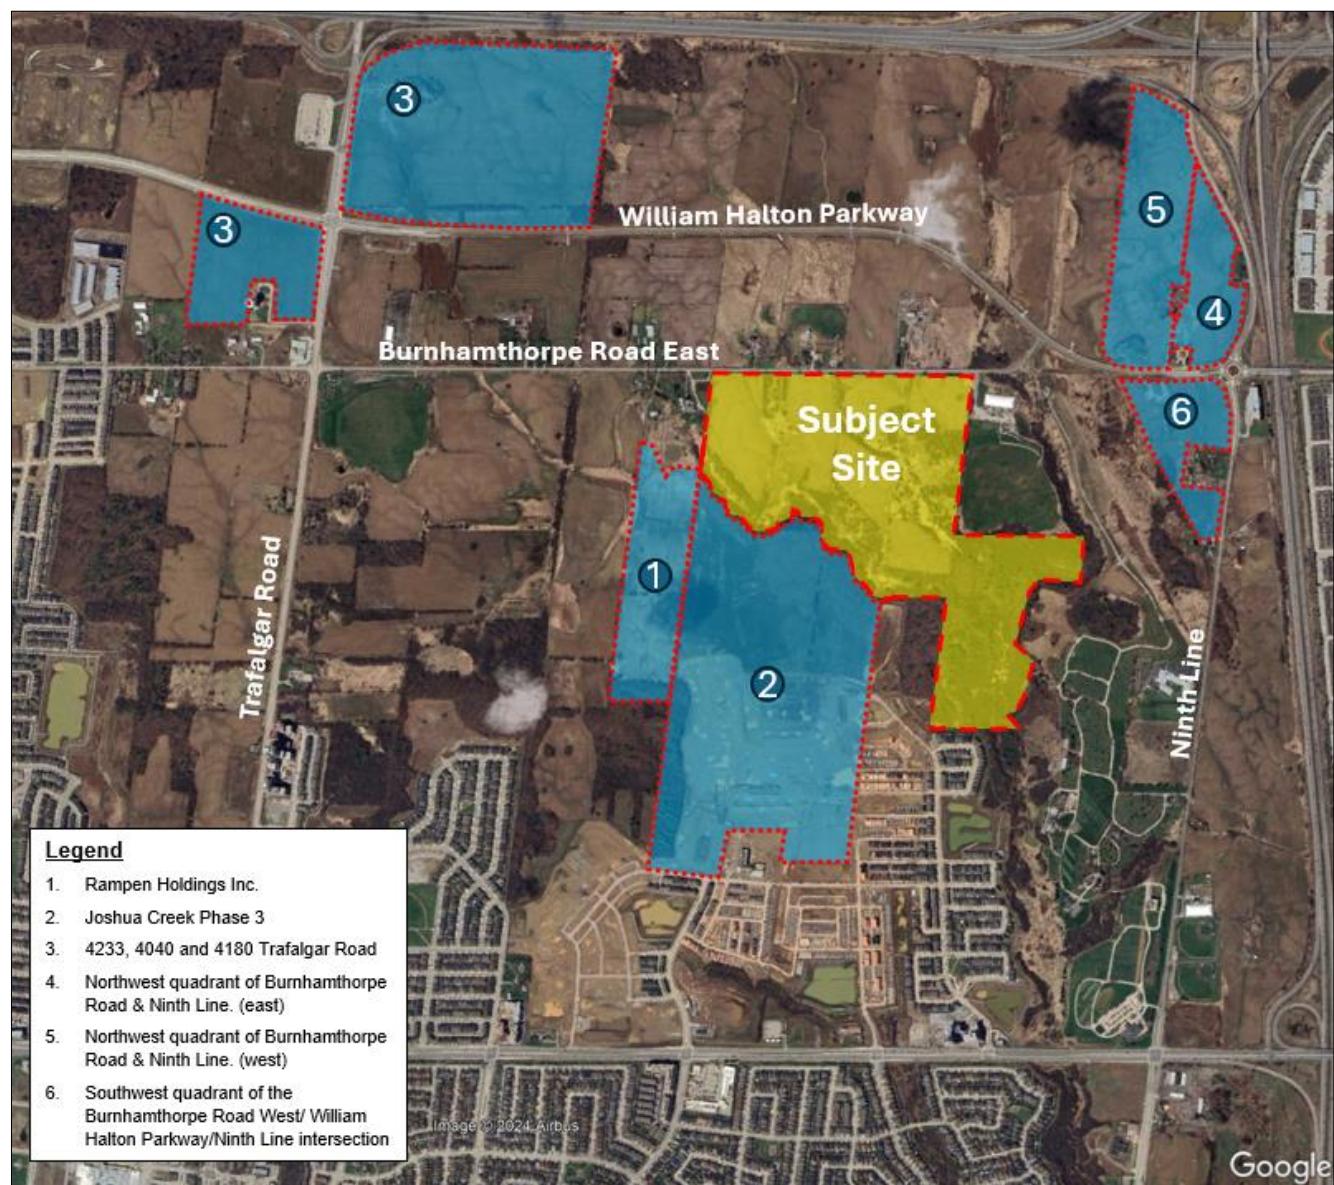

The following developments were identified by Town of Oakville staff as being located in close proximity to the subject site that would generate additional traffic along the study area roadways:

- Rampen Holdings Inc. (1086 Burnhamthorpe Road East)
- Mattamy (Joshua Creek) Limited - Phase 3
- 1187 Burnhamthorpe Road East

- 4233, 4040 and 4180 Trafalgar Road
- Northwest quadrant of Burnhamthorpe Road & Ninth Line.
  - 4 employment/industrial office buildings, total GFA of 30,890
  - Two industrial warehouse buildings, total GFA of 84,066 m<sup>2</sup>
- Southwest quadrant of the Burnhamthorpe Road West/William Halton Parkway/Ninth Line intersection
  - Two industrial warehouse buildings, total GFA of 35,000 m<sup>2</sup>

There is an additional proposed development located at 1187 Burnhamthorpe Road East identified by Town staff, however, GHD could not find any relevant information for this development in the Town of Oakville's development application portal. It is GHD's understanding that the development is a Zoroastrian Place of Worship and has assumed the development would generate a negligible amount of traffic during the typical commuter peak hours. As a result, this development was excluded from the list of background developments.

The locations of the background developments are shown in **Figure 7** below.

**Figure 7 Location of Background Developments**

The estimated site trips generated by the proposed background developments were extracted from their respective Traffic Impact Study, where available. The three industrial developments do not have Traffic Impact Studies, and as a result GHD generated site traffic and assigned them to the road network based on information provided by Town staff.

The Rampen Holdings Inc. and Mattamy Joshua Creek Phase 3 traffic studies did not assume the road connection through Joshua Creek North lands and therefore did not assign site traffic to Burnhamthorpe Road East. As a result, at the request of Town staff, GHD assumed the following in establishing the future background total volumes:

- a 50/50 split between traffic heading north to Burnhamthorpe Road East and heading south to Dundas Street can be assumed to re-assign site trips from the two respective background developments.
- The six proposed roads within Joshua Creek North will not be constructed/operational until the full build-out of the lands under future total scenarios. As a result, the re-distribution of the site traffic for both background developments will not take place until future total conditions. This is reflective in **Figure 8** and **Figure 9** below in which the two developments are not included in the total background development traffic but are considered as re-distributed traffic.
- The school component in the Joshua Creek Phase 3 development generated a significant amount of traffic. It was assumed that only 25% of inbound and outbound traffic from the school came from and departed towards the Joshua Creek North lands.

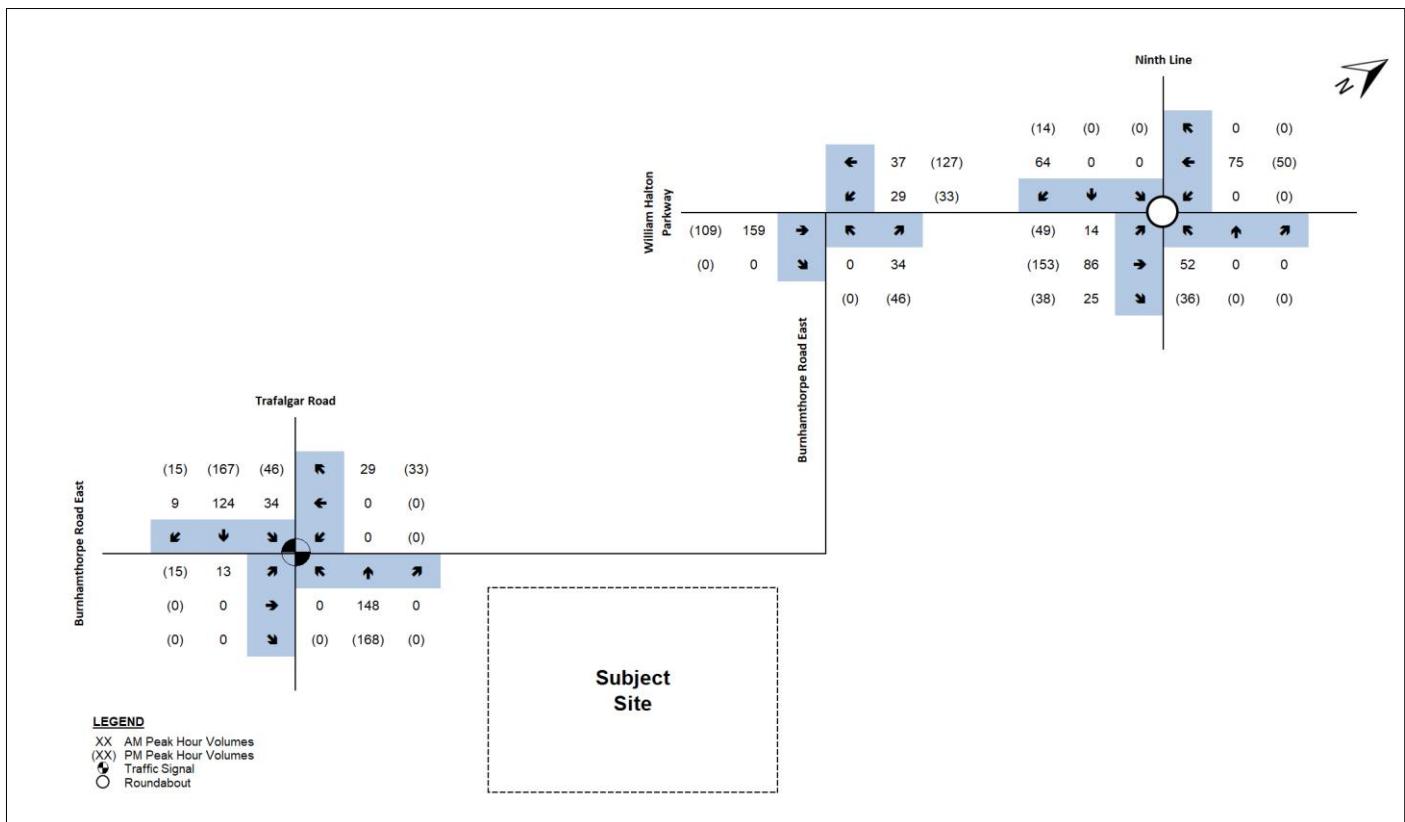

The total trip generation for each development is summarized in **Table 1** below with detailed excerpts from the background studies attached in **Appendix D**.

**Table 1 Background Development Traffic**

Background Development (ID on Figure 7)	Project Statistics	Peak Hour Trips					
		Weekday AM			Weekday PM		
		In	Out	Total	In	Out	Total
Rampen Holdings Inc. (Location 1)	132 Single Family Detached units and 56 Single Family Attached unit	32	87	119	98	61	159
Joshua Creek Phase 3 (Location 2)	1,015 Single Family Detached units and a 700-student elementary school	423	627	1,050	481	325	806
4233, 4040 and 4180 Trafalgar (Location 3)	3,220 residential units and 45,189 m <sup>2</sup> employment GFA	589	565	1,154	674	764	1,438
NW quadrant of Burnhamthorpe Road & Ninth Line (Location 4)	4 employment/industrial office buildings, total GFA of 30,890	85	21	106	24	80	104
NW quadrant of Burnhamthorpe Road & Ninth Line (Location 5)	Two industrial warehouse buildings, total GFA of 84,066 m <sup>2</sup>	119	35	154	46	117	163

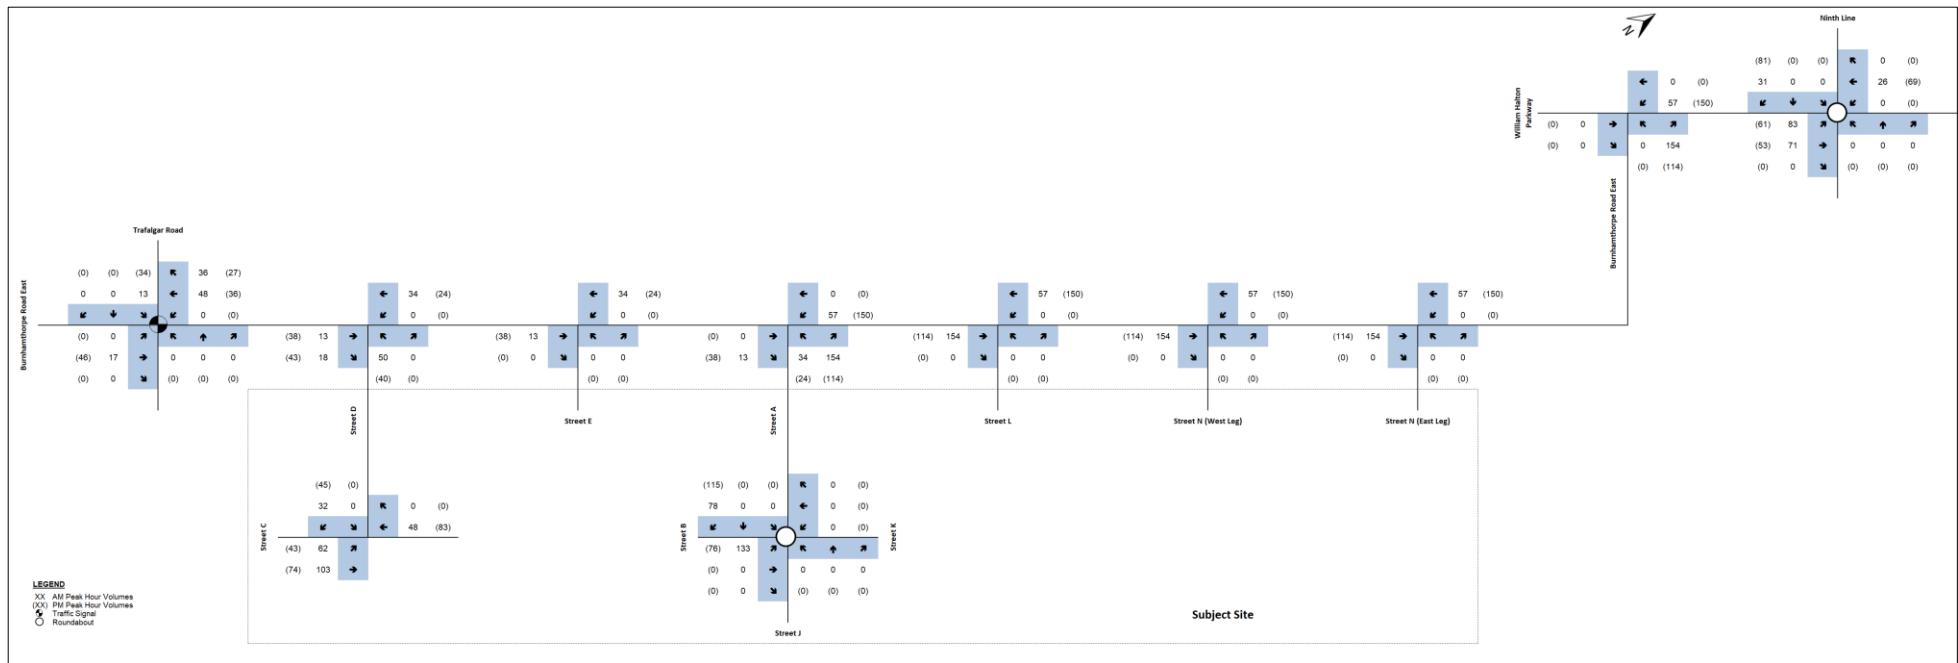

SW quadrant Burnhamthorpe Road West/William Halton Parkway/Ninth Line intersection. (Location 6)	Two industrial warehouse buildings, total GFA of 35,000 m <sup>2</sup>	53	16	69	20	52	72
	<b>Total</b>	<b>1,301</b>	<b>1,351</b>	<b>2,652</b>	<b>1,343</b>	<b>1,399</b>	<b>2,742</b>

The total background development traffic from the background developments is summarized in **Figure 8**.

**Figure 8      Total Background Development Traffic**

The re-distributed traffic from the Rampen and Joshua Creek Phase 3 developments is summarized in **Figure 9**.

**Figure 9** *Background Development Redistribution*

## 4.4 Roadway Improvements

Halton Region is currently on Phase 2 of the Trafalgar Road Improvements, which includes the section from Hays Boulevard to William Halton Parkway. The road improvements include, but are not limited to, a widening from four to six lanes, new sidewalks new multi use pathways, and new bus stops and shelters.

Construction was scheduled to begin in 2024 with Phase 2 construction projected to be completed in 2026. As a result, it is assumed that the widening of Trafalgar Road within the study area will be completed within the 2031 horizon year.

## 4.5 Future Lane Configuration

With the development of the subject site, it is proposed to construct 6 new roadways that would intersect Burnhamthorpe Road East as unsignalized intersections.

The development also proposes to include two new roadways over the Natural Heritage System towards the lands to the south.

The future proposed road network and its lane configuration is shown in **Figure 10**.

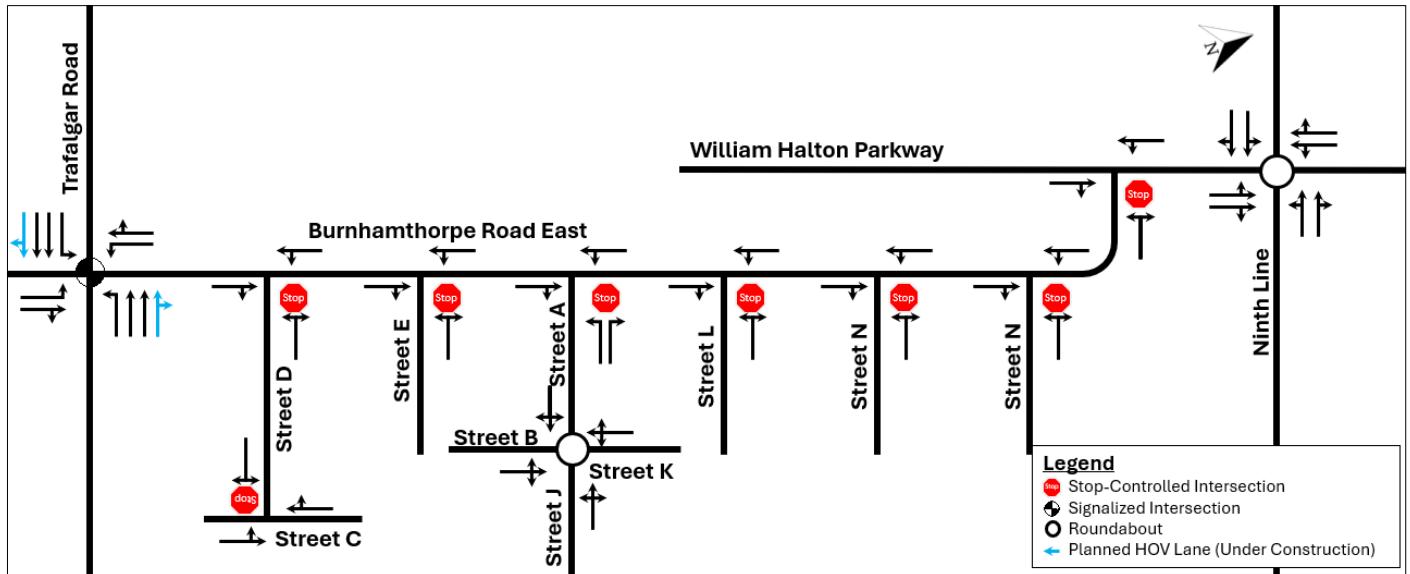

Figure 10 Future Lane Configuration

## 4.6 Future Background Traffic Volumes

The future background traffic volumes for the 2031 and 2036 horizon year were derived by applying the 3.5% per annum growth rates to the study area roads and the total background development traffic from **Figure 8**. The resulting 2031 and 2036 future background traffic volumes are summarized in **Figure 11** and **Figure 12**.

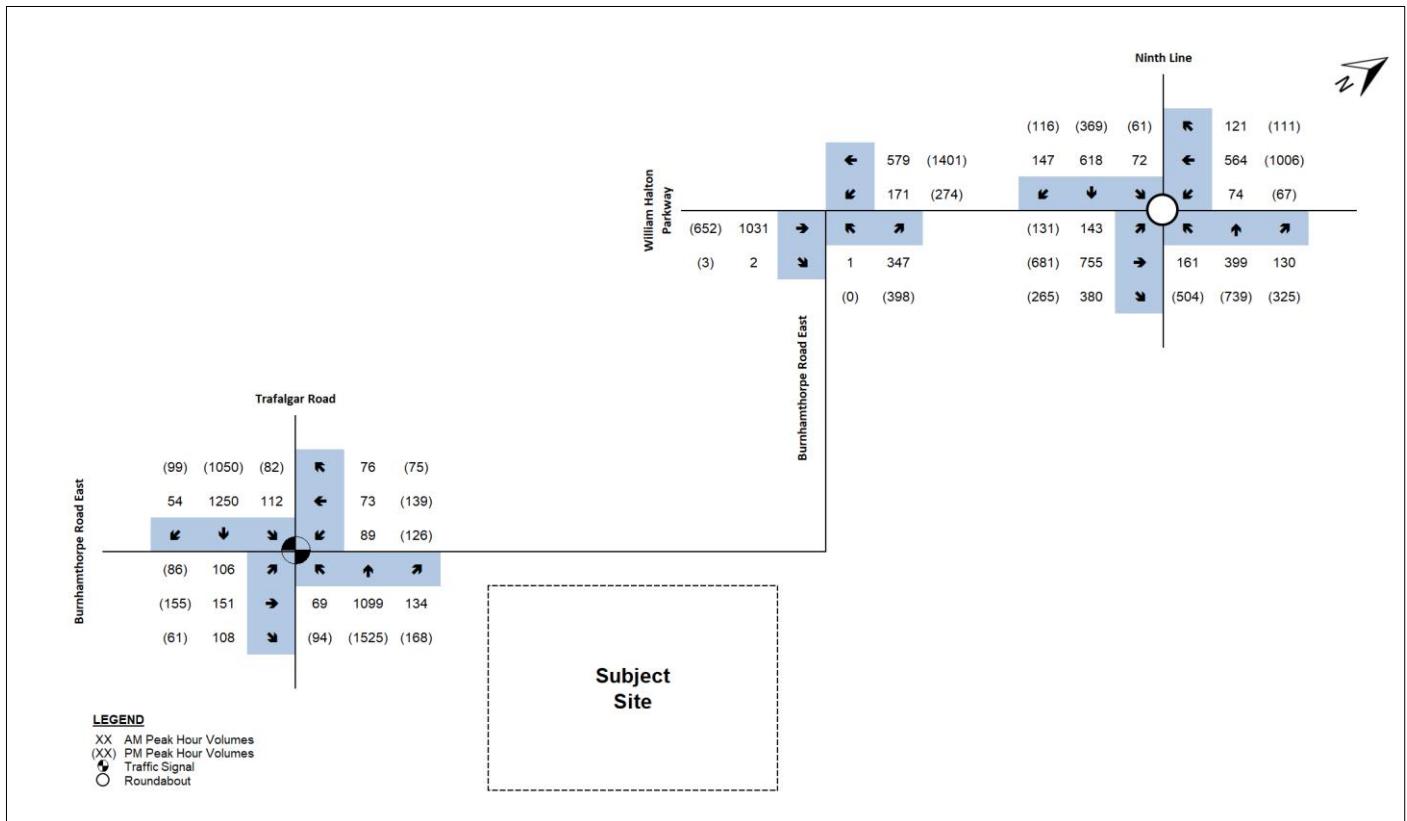

Figure 11 2031 Future Background Traffic Volumes

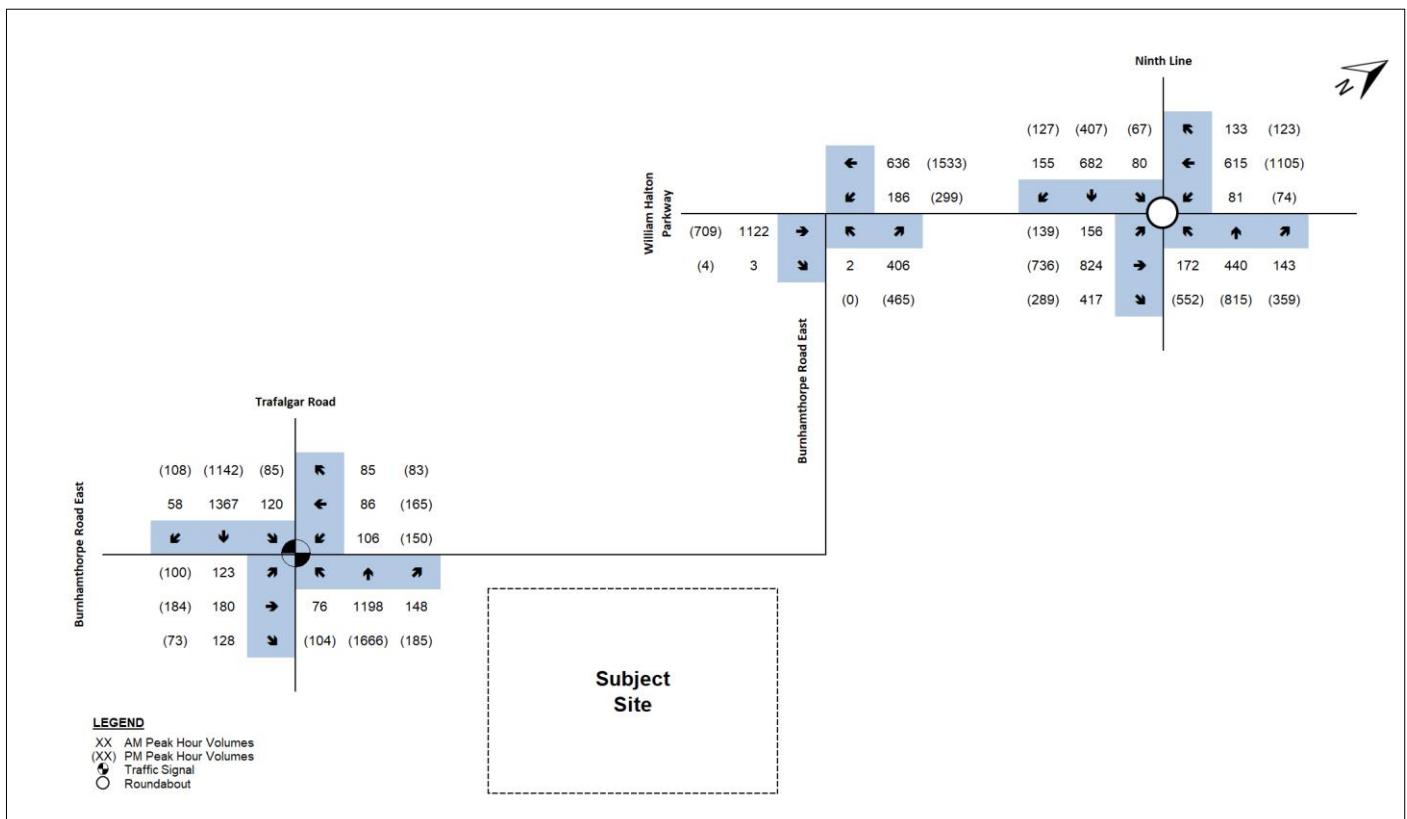

Figure 12 2036 Future Background Traffic Volumes

# 5. Site Generated Traffic

## 5.1 Site Trip Generation

The proposed development consists of a total of 556 dwelling units. The breakdown between each unit type is as follows:

- 382 single detached dwelling units
- 96 street townhouse dwelling units
- 78 rear lane townhouse dwelling units

Site traffic generated by the proposed development for the weekday a.m. and p.m. peak hours was estimated by applying the trip rates for Land Use Code (LUC) 210 (Single Family Attached Housing) and 215 (Single Family Attached Housing) in the 11th Edition of the Trip Generation Manual published by the Institute of Transportation Engineers (ITE).

The Single Family Detached Housing LUC was applied to all single detached dwelling units and the Single Family. A comparison of the fitted curve equations and average rates for each individual Land Use Code was completed, therefore whichever calculation resulted in a greater trip generation was applied as a conservative measure.

Consistent with other traffic studies completed in the area, an 18% total mode split has been assumed for the study area. The ITE trip rates have a 5% non-auto mode split built into its rates, and as a result a 13% reduction was applied to all residential inbound and outbound site generated traffic during both peak hours from the calculated site trips estimated by the ITE trip rates.

**Table 2** summarizes the estimated trip generation for the subject site. The trip generation was completed separately for the west block and the east block.

**Table 2 Total Site Trip Generation**

Unit Type (LUC)	Unit Count	Parameters	Peak Hour Trip Generation					
			Weekday AM			Weekday PM		
			In	Out	Total	In	Out	Total
Single Family Detached (LUC 210)	382	Gross Trips	67	200	267	226	133	359
		Modal Split Reduction	-9	-26	-35	-29	-17	-46
		New Trips	58	174	232	197	116	313
Single Family Attached (LUC 215)	174	Gross Trips	21	64	85	59	41	100
		Modal Split Reduction	-3	-8	-11	-8	-5	-13
		New Trips	18	56	74	51	36	87
<b>Total New Primary Trips</b>			<b>76</b>	<b>230</b>	<b>306</b>	<b>248</b>	<b>152</b>	<b>400</b>

The proposed development is expected to generate a total of 306 two-way vehicle trips during the a.m. peak hour consisting of 76 inbound and 230 outbound trips. During the p.m. peak hour, it is expected to generate 400 new two-way vehicle trips consisting of 248 inbound and 152 outbound trips.

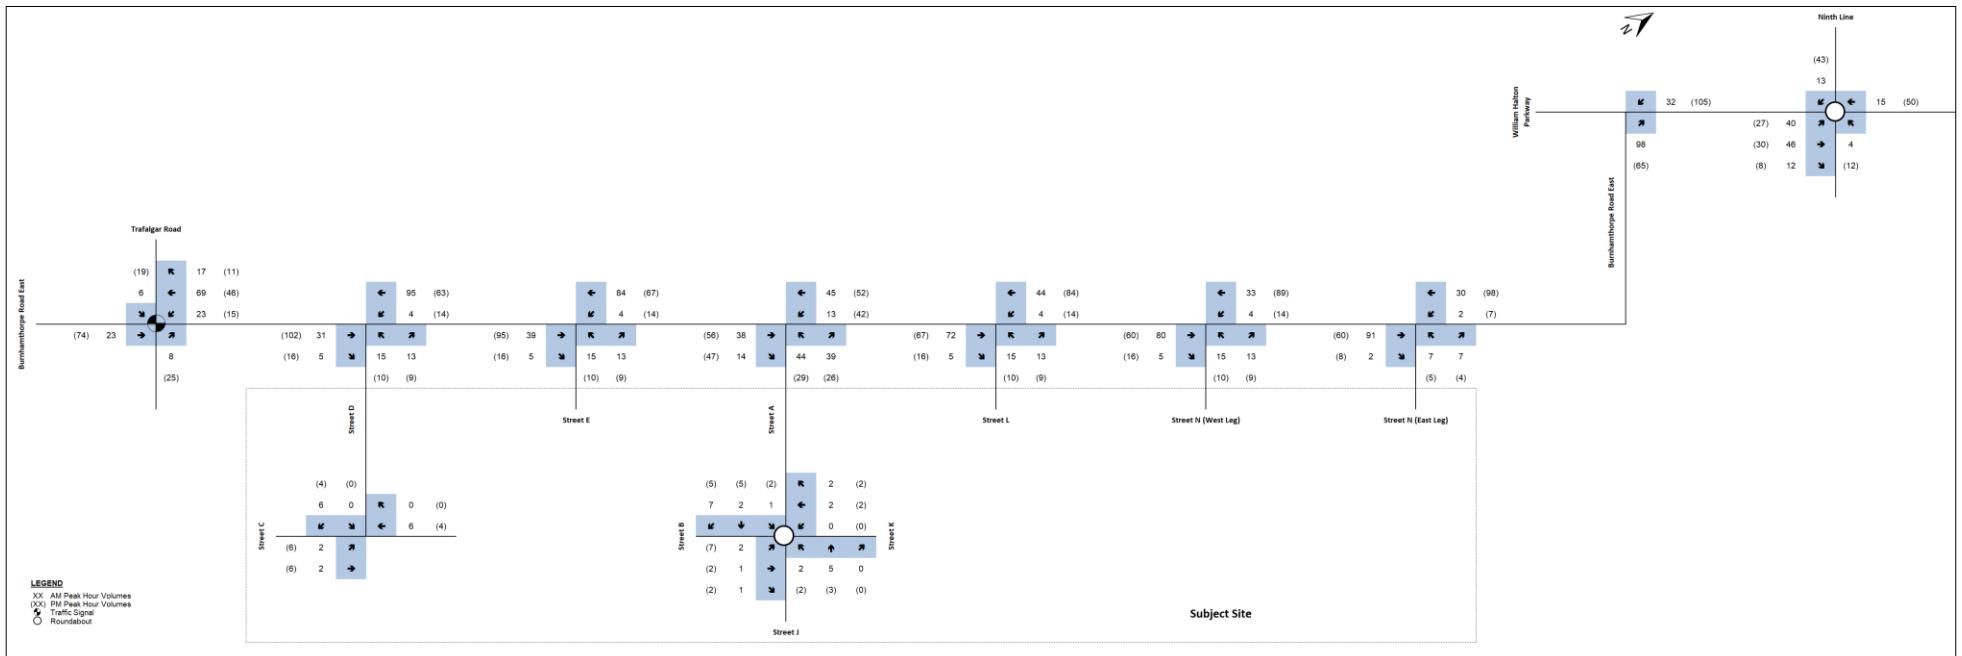

## 5.2 Site Traffic Distribution and Assignment

The site generated traffic for the subject site was distributed based on a review of the existing travel patterns and is generally consistent with the distribution established in the Traffic Impact Studies prepared for adjacent developments.

The directional distribution is provided in **Table 3**. The total site trips for the proposed development is summarized in **Figure 13**.

**Table 3 Site Traffic Distribution**

Peak Period	Direction	North (Trafalgar)	North (Ninth Line)	South (Trafalgar)	South (Ninth Line)	South (Through Joshua Creek Phase 3)	East (Burnhamt horpe)	West (Burnhamt horpe)
AM	Inbound	7.5%	17.5%	10%	5%	10%	20%	30%
	Outbound	7.5%	17.5%	10%	5%	10%	20%	30%

	Outbound	7.5%	17.5%	10%	5%	10%	20%	30%

**Figure 13 Total Site Trips**

## 6. Future Total Traffic

The future total traffic conditions in the weekday a.m. and p.m. peak hours for the 2031 and 2036 planning horizon were derived by combining the projected future background traffic with the corresponding estimated site generated traffic in addition to the traffic redistribution. The resulting traffic volumes are presented in **Figure 14** for the 2031 horizon year and **Figure 15** for the 2036 horizon year.

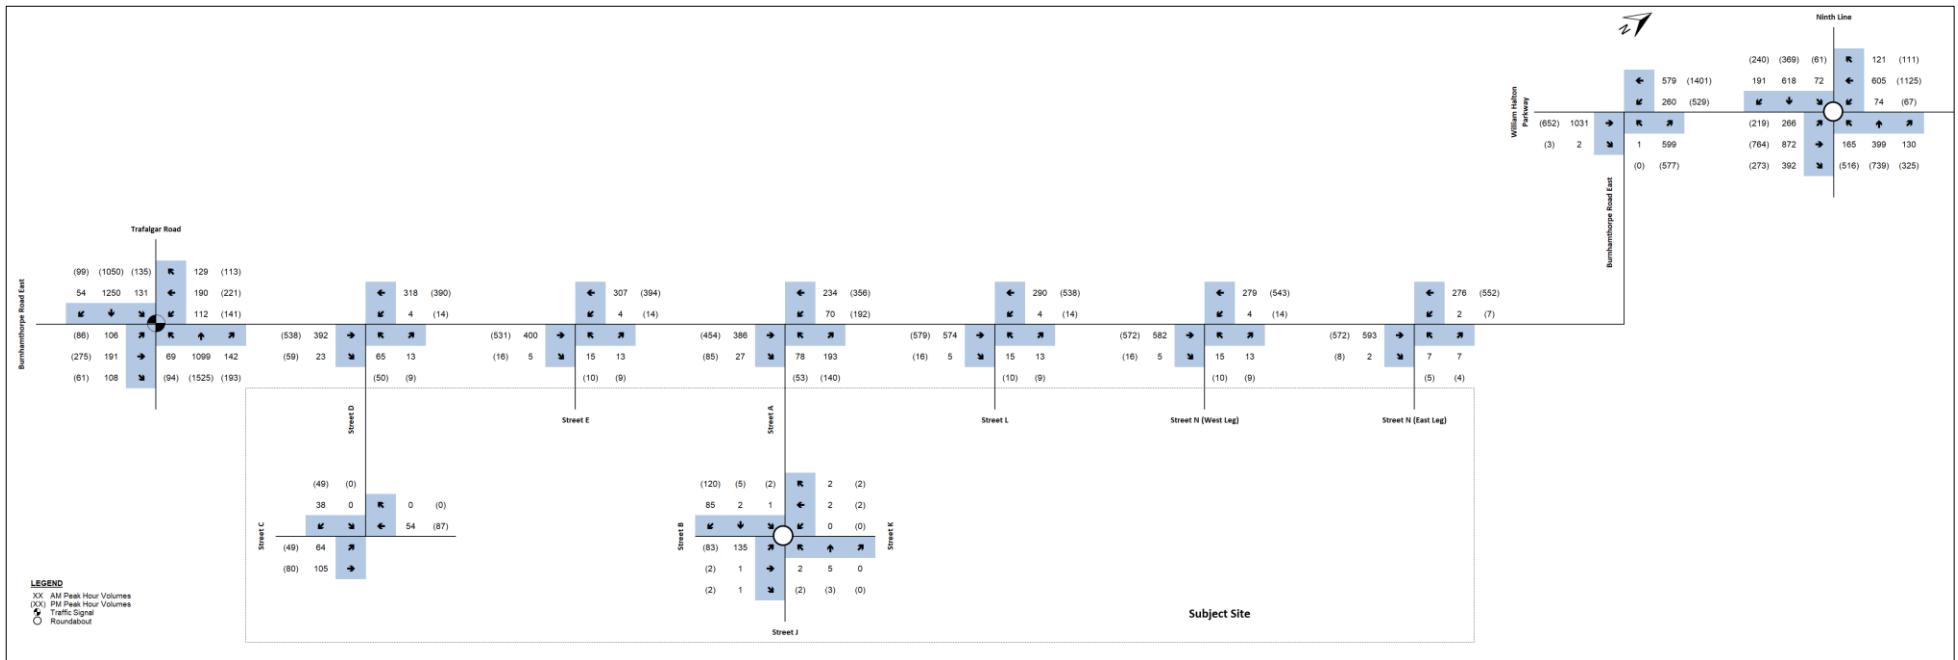

Figure 14 2031 Future Total Traffic Volumes

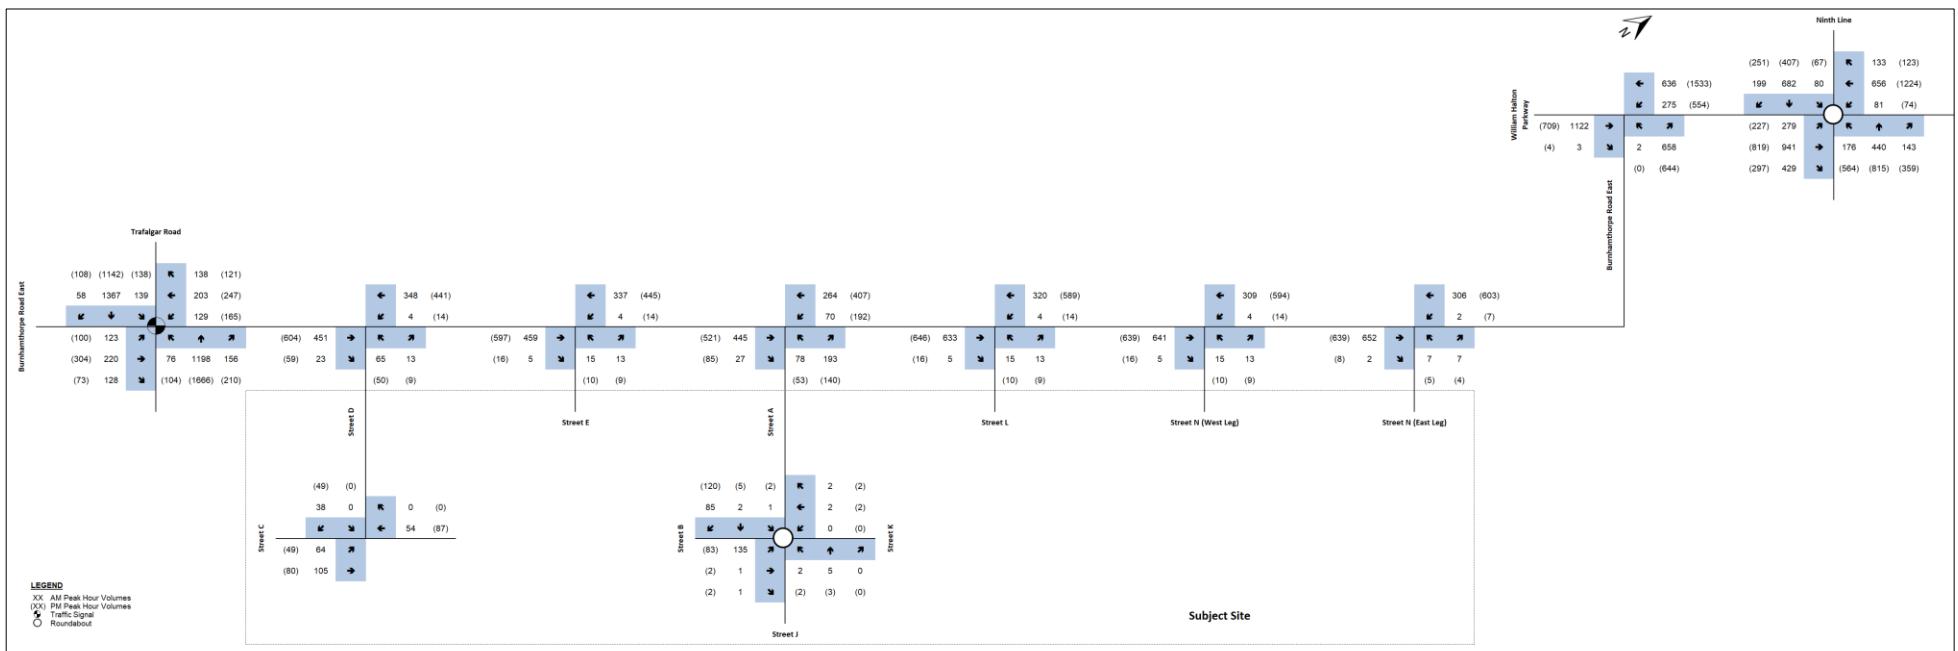

Figure 15 2036 Future Total Traffic Volumes

# 7. Capacity Analysis

The capacity analysis identifies how well the intersections and driveways are operating. The analysis contained within this report utilized the Highway Capacity Manual (HCM) 2000 procedure within the Synchro Version 11 Software package. The reported intersection volume-to-capacity ratios (v/c) are a measure of the saturation volume for each turning movement, while the levels-of-service (LOS) are a measure of the average delay for each turning movement. Queuing characteristics are reported as the predicted 95th percentile queue for each turning movement. Both pedestrian crossing volumes and heavy vehicle proportions are included in the analyses. The peak hour factors from the counts were used to analyze existing and future traffic conditions.

The analysis includes identification and required modifications and improvements (if any) at intersections where the addition of background growth or background growth plus site-generated traffic volumes causes the following:

'Critical' intersections and movements for a signalized intersection include:

- V/C ratios for overall intersections operations increase to 0.85 or above;
- V/C ratios for individual movements increase to 0.95 or above; or
- 95<sup>th</sup> percentile queue length for individual movements that are projected to, or exceed, the storage length.

'Critical' intersections and movements for an unsignalized intersection include:

- Level of Services (LOS), based on average delay per vehicle, on individual movements exceeds LOS "D",
- Queue length for individual movements exceed the available queue storage.

The following tables summarize the HCM capacity results for the study intersections during the weekday a.m. and p.m. peak hours under existing (2024), future background (2031 and 2036) and future total (2031 and 2036) traffic conditions. The detailed calculation sheets are provided in **Appendix E**.

## 7.1 Trafalgar Road and Burnhamthorpe Road East

Capacity analysis at this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic conditions are summarized in the following table.

**Table 4 Capacity analysis of Trafalgar Road and Burnhamthorpe Road East**

Scenario	AM Peak Hour		PM Peak Hour

Under existing traffic conditions, the signalized intersection of Trafalgar Road and Burnhamthorpe Road East is operating at satisfactory levels with an overall v/c ratio of 0.58 LOS B during the a.m. peak hour and 0.63 LOS B during the p.m. peak hour. The intersection does not currently operate with a critical movement.

With the addition of corridor growth, background development traffic, and signal improvements to mitigate delays for the 2031 future background traffic scenario, the overall reported v/c of the intersection is expected to increase to 0.62 LOS B during the a.m. peak hour and 0.70 LOS B during the p.m. peak hour. The intersection continues to operate without any critical movements during both peak hours.

Under the 2031 future total traffic scenario, with redistribution of background development traffic and the addition of site generated traffic from the proposed development, the overall v/c ratio is reported to increase to 0.66 LOS B during the a.m. peak hour and 0.84 LOS C during the p.m. peak hour. The intersection continues to operate without any critical movements during the a.m. peak hour while the westbound left-turn lane operates at critical levels during the p.m. peak hour.

With the addition of corridor growth, background development traffic, and signal improvements to mitigate delays for the 2036 future background traffic scenario, the overall reported v/c of the intersection is expected to increase to 0.73 LOS C during the a.m. peak hour and 0.80 LOS C during the p.m. peak hour. The intersection continues to operate without any critical movements during both peak hours.

Under the 2036 future total traffic scenario, with redistribution of background development traffic and the addition of site generated traffic from the proposed development, the overall v/c ratio is reported to increase to 0.78 LOS C during the a.m. peak hour and 0.93 LOS C during the p.m. peak hour. The overall intersection operates at a critical level during the p.m. peak hour in addition to the eastbound shared through/right-turn lane during the a.m. peak hour and the westbound left-turn lane during the p.m. peak hour. All movements are reported to operate below capacity.

There are no geometric improvements recommended for the intersection as a result of the proposed development.

## 7.2 William Halton Parkway and Burnhamthorpe Road East

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the existing, future background, and future total traffic conditions are summarized in the following table.

**Table 5 Capacity analysis of William Halton Parkway and Burnhamthorpe East**

Future Total 2036 (Widening and Signalization)	<u>Overall: 0.91 (D) 39</u> EBTR = 0.9 (D) 41 WBL = 0.88 (D) 53 WBT = 0.34 (B) 12 NBLR = 0.91 (D) 54	EBTR = 195 m WBL = 105 m WBT = 60 m NBLR = 175 m	<u>Overall: 0.72 (B) 15</u> EBTR = 0.65 (C) 23 WBL = 0.73 (B) 16 WBT = 0.6 (A) 5 NBLR = 0.49 (C) 30	EBTR = 100 m WBL = 120 m WBT = 120 m NBLR = 40 m

Under existing traffic conditions, the unsignalized intersection of William Halton Parkway and Burnhamthorpe Road East is operating at satisfactory levels with the greatest delay occurring in the northbound approach with a 39 second delay during the a.m. peak hour and 17 second delay during the p.m. peak hour.

With the addition of corridor growth and background development traffic for the 2031 future background traffic scenario, the intersection operates at critical levels with the northbound approach operating with a 310 second delay during the a.m. peak hour and 51 second delay during the p.m. peak hour.

Under the 2031 future total traffic scenario, with redistribution of background development traffic and the addition of site generated traffic from the proposed development, the intersection continues to operate at critical levels with the delay in the northbound approach reported at 811 seconds during the a.m. peak hour and a 177 second delay during the p.m. peak hour.

William Halton Parkway is anticipated to be widened to a 4-lane cross-section with the timeline currently unknown. With the widening along William Halton Parkway, the reported delays are reported to decrease, however the

intersection continues to operate above capacity under the future total scenario. The northbound approach is reported to operate with a 42 and 19 second delay during the a.m. and p.m. peak hour respectively under the 2031 future background scenario. Under the 2031 future total scenario, the delay is reported to increase to 236 seconds during the a.m. Peak hour and 40 second delay during the p.m. peak hour

In order to further mitigate some of the delays, GHD completed an analysis of the intersection as a signalized intersection. With the signalization of William Halton Parkway and Burnhamthorpe Road East, the intersection operates with an overall v/c ratio of 0.55 LOS B during the a.m. peak hour and 0.63 LOS A during the p.m. peak hour under the 2031 future background condition. Under future total 2031 condition, the overall v/c ratio is reported to increase to 0.81 LOS C during the a.m. peak hour and 0.68 LOS B during the p.m. peak hour with all movements reported to operate below capacity.

With the addition of corridor growth and background development traffic for the 2036 future background traffic scenario, the intersection operates at critical levels with the northbound approach operating with a 548 second delay during the a.m. peak hour and 115 second delay during the p.m. peak hour.

Under the 2036 future total traffic scenario, with redistribution of background development traffic and the addition of site generated traffic from the proposed development, the intersection continues to operate at critical levels with the delay in the northbound approach exceeding the software's capabilities during the a.m. peak hour and a 290 second delay during the p.m. peak hour.

Similarly to the 2031 horizon year, GHD assessed the operation of the intersection with a widening along William Halton Parkway and signalization of the intersections. With the signalization of William Halton Parkway and Burnhamthorpe Road East, the intersection is reported to operate with an overall v/c ratio of 0.65 LOS B during the a.m. peak hour and 0.66 LOS A during the p.m. peak hour under the 2036 future background condition. Under future total 2031 condition, the overall v/c ratio is reported to increase to 0.91 LOS D during the a.m. peak hour and 0.72 LOS B during the p.m. peak hour.

With the assumed William Halton Parkway widening to a 4-lane cross-section and the signalization of the intersection under the 2036 horizon year, the intersection is reported to operate with some critical movements, however the delays and queuing have been minimized in comparison to the scenarios with the existing lane configurations and traffic controls. The Region should continue to monitor the operation of the intersection to determine when a widening and/or signalization of the intersection would be warranted.

A signal warrant was completed for the intersection under the Future Background 2031 condition and confirms that a signalized intersection is warranted based on Justification 1. The signal warrant is provided in [Appendix F](#).

Under existing conditions, the roundabout is reported to operate satisfactorily using both a 15% y-intercept and 0% y-intercept. The 15% y-intercept takes into consideration the unfamiliarity that some drivers may have with the operation of roundabouts whereas a 0% y-intercept represents residents becoming more accustomed to using roundabouts within the Region.

Under the 2031 future background traffic scenario, the roundabout is reported to operate at a satisfactory level using a 15% y-intercept while using a 0% y-intercept results in the northbound and westbound approaches during the p.m. peak hour reported to operate at capacity.

With the redistribution of background development traffic and the addition of site generated traffic under the 2031 future total traffic condition, the roundabout is reported to operate at mostly satisfactory levels using the 0% y-intercept while the northbound and westbound approaches continue to operate above capacity during the p.m. peak hour using the 15% y-intercept.

Under the 2036 future background traffic scenario, the roundabout is reported to operate at a satisfactory level using a 15% y-intercept while using a 0% y-intercept results in the eastbound approach during the a.m. peak hour and the northbound and westbound approaches during the p.m. peak hour reported to operate at capacity.

With the redistribution of background development traffic and the addition of site generated traffic under the 2036 future total traffic condition, the roundabout is reported to continue to operate at mostly satisfactory levels. With a 15% y-intercept, the eastbound approach during the a.m. peak hour and northbound and westbound approaches continue to operate above capacity during the p.m. peak hour. When modeling the intersection with a 0% y-intercept, the northbound and westbound approaches are reported to operate at capacity with both movements operating with v./c ratios of 1.01 LOS F.

## 7.4 Burnhamthorpe Road East and Street A

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the future total traffic conditions are summarized in the following table.

**Table 7 Capacity analysis of Burnhamthorpe Road East and Street A**

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 <sup>th</sup> % Que.	V/C (LOS) seconds	95 <sup>th</sup> % Que
Future Total 2031	EBTR = 0.28 (A) 0 WBTL = 0.16 (A) 5 NBL = 0.51 (C) 38 NBR = 0.48 (A) 16	EBTR = 0 m WBTL = 5 m NBL = 20 m NBR = 20 m	EBTR = 0.35 (A) 0 WBTL = 0.23 (A) 5 NBL = 0.5 (D) 60 NBR = 0.32 (A) 15	EBTR = 0 m WBTL = 10 m NBL = 20 m NBR = 10 m
Future Total 2036	EBTR = 0.32 (A) 0 WBTL = 0.17 (A) 5 NBL = 0.59 (D) 49 NBR = 0.52 (A) 18	EBTR = 0 m WBTL = 5 m NBL = 25 m NBR = 25 m	EBTR = 0.39 (A) 0 WBTL = 0.24 (A) 6 NBL = 0.61 (D) 85 NBR = 0.35 (A) 16	EBTR = 0 m WBTL = 10 m NBL = 25 m NBR = 15 m

Under future total 2031 and 2036 conditions, the proposed unsignalized intersection of Street A and Burnhamthorpe Road East is reported to operate at satisfactory levels with a maximum delay of 85 seconds reported during the p.m. peak hour under the 2036 future total scenario while the delays along Burnhamthorpe Road East do not exceed 6 seconds.

## 7.5 Burnhamthorpe Road East and Street D

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the future total traffic conditions are summarized in the following table.

**Table 8 Capacity analysis of Burnhamthorpe Road East and Street D**

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 <sup>th</sup> % Que.	V/C (LOS) seconds	95 <sup>th</sup> % Que
Future Total 2031	EBTR = 0.3 (A) 0 WBTL = 0 (A) 0 NBLR = 0.3 (C) 20	EBTR = 0 m WBTL = 5 m NBLR = 10 m	EBTR = 0.39 (A) 0 WBTL = 0.02 (A) 0 NBLR = 0.27 (C) 24	EBTR = 0 m WBTL = 5 m NBLR = 10 m
Future Total 2036	EBTR = 0.33 (A) 0 WBTL = 0 (A) 0 NBLR = 0.35 (C) 23	EBTR = 0 m WBTL = 5 m NBLR = 15 m	EBTR = 0.43 (A) 0 WBTL = 0.02 (A) 0 NBLR = 0.32 (D) 29	EBTR = 0 m WBTL = 5 m NBLR = 10 m

Under future total 2031 and 2036 conditions, the proposed unsignalized intersection of Street D and Burnhamthorpe Road East is reported to operate at satisfactory levels with a maximum delay of 29 seconds reported during the p.m. peak hour under the 2036 future total scenario while no delays are reported along Burnhamthorpe Road East.

## 7.6 Burnhamthorpe Road East and Street E

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the future total traffic conditions are summarized in the following table.

**Table 9 Capacity analysis of Burnhamthorpe Road East and Street E**

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 <sup>th</sup> % Que.	V/C (LOS) seconds	95 <sup>th</sup> % Que
Future Total 2031	EBTR = 0.27 (A) 0 WBTL = 0 (A) 0 NBLR = 0.07 (B) 14	EBTR = 0 m WBTL = 5 m NBLR = 5 m	EBTR = 0.35 (A) 0 WBTL = 0.02 (A) 0 NBLR = 0.06 (C) 17	EBTR = 0 m WBTL = 5 m NBLR = 5 m
Future Total 2036	EBTR = 0.31 (A) 0 WBTL = 0 (A) 0 NBLR = 0.08 (C) 15	EBTR = 0 m WBTL = 5 m NBLR = 5 m	EBTR = 0.39 (A) 0 WBTL = 0.02 (A) 0 NBLR = 0.07 (C) 19	EBTR = 0 m WBTL = 5 m NBLR = 5 m

Under future total 2031 and 2036 conditions, the proposed unsignalized intersection of Street E and Burnhamthorpe Road East is reported to operate at satisfactory levels with a maximum delay of 19 seconds reported during the p.m. peak hour under the 2036 future total scenario while no delays are reported along Burnhamthorpe Road East.

## 7.7 Burnhamthorpe Road East and Street L

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the future total traffic conditions are summarized in the following table.

**Table 10 Capacity analysis of Burnhamthorpe Road East and Street L**

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 <sup>th</sup> % Que.	V/C (LOS) seconds	95 <sup>th</sup> % Que
Future Total 2031	EBTR = 0.42 (A) 0 WBTL = 0 (A) 0 NBLR = 0.1 (C) 19	EBTR = 0 m WBTL = 5 m NBLR = 5 m	EBTR = 0.39 (A) 0 WBTL = 0.02 (A) 0 NBLR = 0.08 (C) 20	EBTR = 0 m WBTL = 5 m NBLR = 5 m
Future Total 2036	EBTR = 0.46 (A) 0 WBTL = 0 (A) 0 NBLR = 0.12 (C) 21	EBTR = 0 m WBTL = 5 m NBLR = 5 m	EBTR = 0.44 (A) 0 WBTL = 0.02 (A) 0 NBLR = 0.1 (C) 23	EBTR = 0 m WBTL = 5 m NBLR = 5 m

Under future total 2031 and 2036 conditions, the proposed unsignalized intersection of Street L and Burnhamthorpe Road East is reported to operate at satisfactory levels with a maximum delay of 23 seconds reported during the p.m. peak hour under the 2036 future total scenario while no delays are reported along Burnhamthorpe Road East.

## 7.8 Burnhamthorpe Road East and Street N (West Leg)

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the future total traffic conditions are summarized in the following table.

**Table 11 Capacity analysis of Burnhamthorpe Road East and Street N (West Leg)**

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 <sup>th</sup> % Que.	V/C (LOS) seconds	95 <sup>th</sup> % Que
Future Total 2031	EBTR = 0.42 (A) 0 WBTL = 0 (A) 0 NBLR = 0.1 (C) 19	EBTR = 0 m WBTL = 5 m NBLR = 5 m	EBTR = 0.39 (A) 0 WBTL = 0.02 (A) 0 NBLR = 0.08 (C) 20	EBTR = 0 m WBTL = 5 m NBLR = 5 m
Future Total 2036	EBTR = 0.46 (A) 0 WBTL = 0 (A) 0 NBLR = 0.12 (C) 21	EBTR = 0 m WBTL = 5 m NBLR = 5 m	EBTR = 0.43 (A) 0 WBTL = 0.02 (A) 0 NBLR = 0.1 (C) 23	EBTR = 0 m WBTL = 5 m NBLR = 5 m

Under future total 2031 and 2036 conditions, the proposed unsignalized intersection of the west leg of Street N with Burnhamthorpe Road East is reported to operate at satisfactory levels with a maximum delay of 23 seconds reported during the p.m. peak hour under the 2036 future total scenario while no delays are reported along Burnhamthorpe Road East.

## 7.9 Burnhamthorpe Road East and Street N (East Leg)

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the future total traffic conditions are summarized in the following table.

**Table 12 Capacity analysis of Burnhamthorpe Road East and Street N (East Leg)**

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 <sup>th</sup> % Que.	V/C (LOS) seconds	95 <sup>th</sup> % Que
Future Total 2031	EBTR = 0.43 (A) 0 WBTL = 0 (A) 0 NBLR = 0.05 (C) 18	EBTR = 0 m WBTL = 5 m NBLR = 5 m	EBTR = 0.38 (A) 0 WBTL = 0.01 (A) 0 NBLR = 0.04 (C) 20	EBTR = 0 m WBTL = 5 m NBLR = 5 m
Future Total 2036	EBTR = 0.47 (A) 0 WBTL = 0 (A) 0 NBLR = 0.06 (C) 20	EBTR = 0 m WBTL = 5 m NBLR = 5 m	EBTR = 0.43 (A) 0 WBTL = 0.01 (A) 0 NBLR = 0.04 (C) 22	EBTR = 0 m WBTL = 5 m NBLR = 5 m

Under future total 2031 and 2036 conditions, the proposed unsignalized intersection of the east leg of Street N with Burnhamthorpe Road East is reported to operate at satisfactory levels with a maximum delay of 20 seconds reported during the p.m. peak hour under the 2036 future total scenario while no delays are reported along Burnhamthorpe Road East.

## 7.10 Street A/J and Street B/K

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the future total traffic conditions are summarized in the following table.

**Table 13 Capacity analysis of Street A/J and Street B/K**

Traffic Condition	Location	AM Peak Hour			PM Peak Hour		
		V/C Ratio	LOS	95 <sup>th</sup> % Que (veh)	V/C Ratio	LOS	95 <sup>th</sup> % Que (veh)
Future Total 2031 (15% y-intercept)	NB Street J	0.01	A	1	0.01	A	1
	WB Street K	0.00	A	1	0.00	A	1
	SB Street A	0.06	A	1	0.08	A	1
	EB Street B	0.11	A	1	0.07	A	1
Future Total 2031 (0% y-intercept)	NB Street J	0.01	A	1	0.00	A	1
	WB Street K	0.00	A	1	0.00	A	1
	SB Street A	0.05	A	1	0.07	A	1
	EB Street B	0.10	A	1	0.06	A	1
Future Total 2036 (15% y-intercept)	NB Street J	0.01	A	1	0.01	A	1
	WB Street K	0.00	A	1	0.00	A	1
	SB Street A	0.06	A	1	0.08	A	1
	EB Street B	0.11	A	1	0.07	A	1
Future Total 2036 (0% y-intercept)	NB Street J	0.01	A	1	0.00	A	1
	WB Street K	0.00	A	1	0.00	A	1
	SB Street A	0.05	A	1	0.07	A	1
	EB Street B	0.10	A	1	0.06	A	1

Under the 2031 and 2036 future total conditions, the proposed roundabout at Streets A/J and Streets B/K are reported to operate at satisfactory levels with low levels of queuing and delays.

## 7.11 Street C and Street D

Capacity analysis for this intersection during the weekday a.m. and p.m. peak hours for the future total traffic conditions are summarized in the following table.

**Table 14 Capacity analysis of Street C and Street D**

Scenario	AM Peak Hour		PM Peak Hour	
	V/C (LOS) seconds	95 <sup>th</sup> % Que.	V/C (LOS) seconds	95 <sup>th</sup> % Que
Future Total 2031	EBTL = 0.05 (A) 3	EBTL = 5 m	EBTL = 0.04 (A) 3	EBTL = 5 m
	WBTR = 0.05 (A) 0	WBTR = 0 m	WBTR = 0.06 (A) 0	WBTR = 0 m
	SBLR = 0.05 (A) 9	SBLR = 5 m	SBLR = 0.06 (A) 9	SBLR = 5 m
Future Total 2036	EBTL = 0.05 (A) 3	EBTL = 5 m	EBTL = 0.04 (A) 3	EBTL = 5 m
	WBTR = 0.05 (A) 0	WBTR = 0 m	WBTR = 0.06 (A) 0	WBTR = 0 m
	SBLR = 0.05 (A) 9	SBLR = 5 m	SBLR = 0.06 (A) 9	SBLR = 5 m

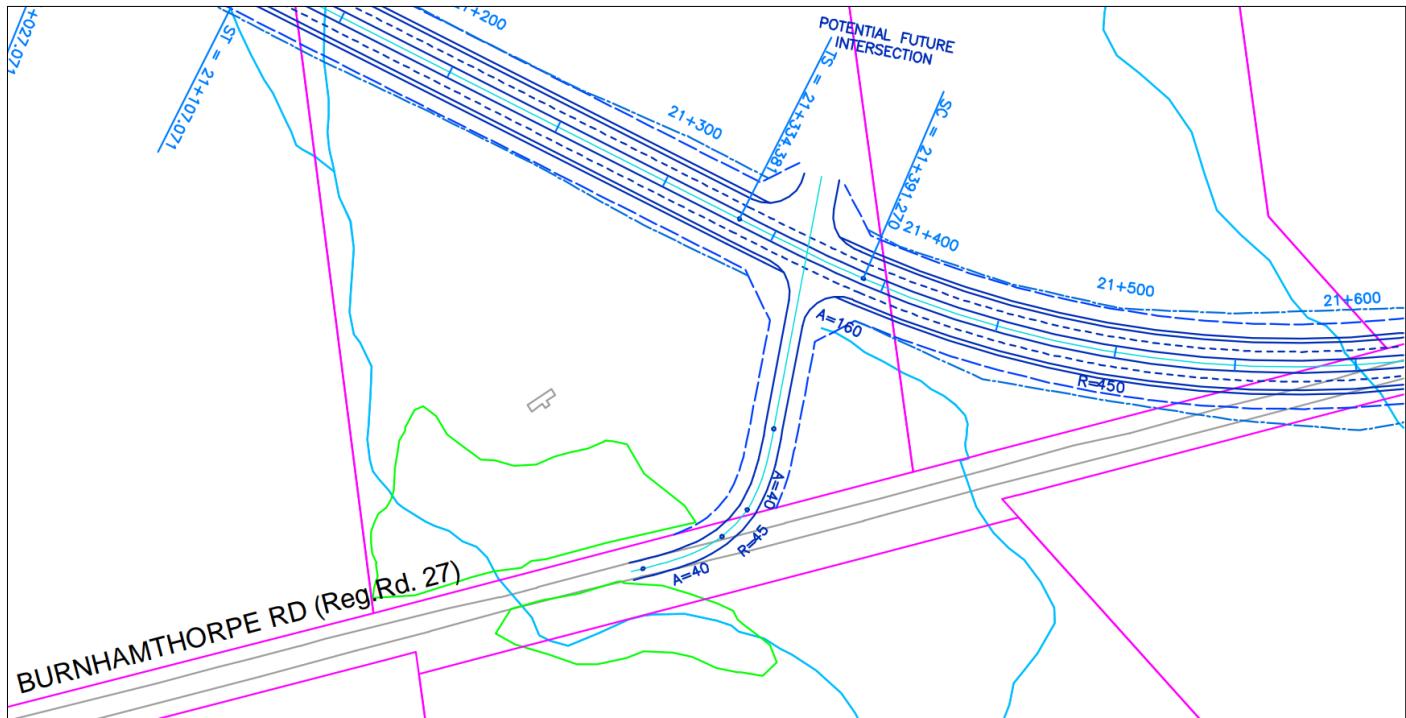

Under the 2031 and 2036 future total conditions, the proposed unsignalized intersection of Street C and Street D operates at satisfactory levels during both peak hours. The greatest delay is reported to occur in the southbound approach with a 9 second delay during both peak hours.

## 8. Recommendations

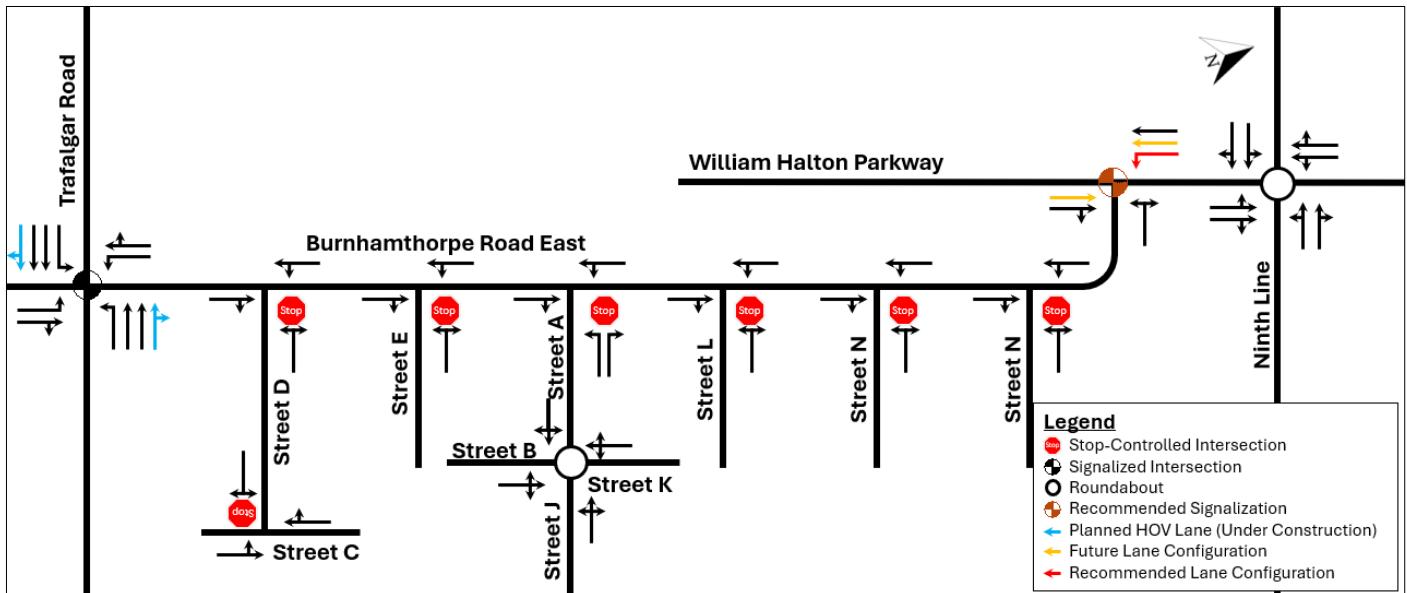

Based on the findings in **Section 7.2**, the Region should continue to monitor the operation of the intersection of William Halton Parkway and Burnhamthorpe Road East and proceed with the following improvements when warranted:

- Advance the widening of William Halton Parkway to a four-lane cross-section within the study area as per the New North Oakville Transportation Corridor and Crossing of Sixteen Mile Creek Class Environmental Assessment Study
- Include a westbound left-turn lane
- Signalize the intersection

An excerpt of the Preferred Design Plan for the intersection from the Class EA is provided in **Figure 16** with the future lane configuration and traffic controls within the study area shown in **Figure 17**.

**Figure 16** William Halton Parkway and Burnhamthorpe Road Preferred Design (Halton Region's Class EA)

**Figure 17 Recommended Future Lane Configurations**

## 9. Parking Review

GHD reviewed the Town's current Zoning By-Law parking requirements for the subject site.

### 9.1 Town of Oakville Zoning By-Law 2009-189

#### 9.1.1 Vehicular Parking

The current Town of Oakville Zoning By-Law 2009-189 minimum parking requirements for residential developments are found in Section 5.1.7m Table 5.1A. The minimum By-Law requirement for the subject site is as follows:

- Single and Semi-detached dwellings
  - A minimum of 2 parking spaces per dwelling unit
- Townhouse dwellings
  - A minimum of 1 parking space per dwelling unit

The minimum parking required for the subject site is as follows:

- Single and Semi-detached dwellings
  - A minimum of 2 parking spaces per dwelling unit x 382 dwelling units = 764 spaces
- Townhouse dwellings
  - A minimum of 1 parking space per dwelling unit x 174 dwelling units = 174 spaces

In total, the subject site is required to provide a minimum of 938 parking spaces.

### 9.2 Proposed Site Parking

The subject site proposes to provide a minimum of 2 parking spaces per dwelling unit for single and semi-detached dwelling units consisting of one parking space in the garage and one space in the driveway while the townhouse dwelling units are proposed to contain at least one parking space, which satisfies the Town's By-law requirement.

## 9.3 On-Street Visitor Parking

The Town's zoning bylaw does not specify a minimum requirement for visitor parking for residential units; however, the Town has expressed a preference to maximize parking availability. A parking plan, prepared by Korsiak and included in **Appendix G**, identifies a total of 244 on-street parking spaces to address this objective.

The parking plan prepared by Korsiak illustrates a maximum on-street parking scenario and does not consider detailed hydrant, driveway, utility and traffic calming locations. Further refinements to the on-street parking totals are anticipated at detailed design.

# 10. Travel Demand Management

## 10.1 Travel Demand Management

Travel Demand Management (TDM) refers to a variety of strategies to reduce congestion, minimize the number of single-occupant vehicles, encourage non-auto modes of travel, and reduce vehicle dependency to create a sustainable transportation system. TDM strategies have multiple benefits including the following:

- Reduced auto-related emissions to improve air quality;
- Decreased traffic congestion to reduce travel time;
- Increased travel options for businesses and commuters;
- Reduced personal transportation costs and energy consumptions; and
- Support Provincial smart growth objectives.

The combined benefits listed above will assist in creating a more active and livable community through improvements to overall active transportation standards for the local businesses and surrounding community.

## 10.2 Recommended TDM Measures

*Table 15 Recommended TDM Strategies*

TDM Measure	Responsibility	Cost	Note
<b>Hard Measures</b>			
Connected Sidewalks and Pathways	Applicant	Integrated into the overall development cost	Sidewalks and multi-use pathways are designed to provide seamless connections to transit stops, parks, schools, and adjacent neighborhoods.
Transit Accessibility	Applicant/Town	Integrated into the overall development cost	Transit stops are planned within 400–500 meters of all residences.
Traffic Calming Measures	Applicant	Integrated into the overall development cost	Measures such as curb bump-outs are incorporated at key locations with higher pedestrian activity to enhance safety and reduce vehicle speeds.

Soft Measures			
TDM Education Campaigns	Applicant/Town	\$1,500 to \$2,500 depending on scope	Campaigns to educate residents on the benefits of carpooling, cycling, walking, and using transit, distributed through digital platforms or pamphlets.

## 10.3 Implementation

The hard measures proposed in the TDM plan outlined in this plan will be incorporated into the development design and are illustrated on the site plan. It is understood that the “soft” measures of the TDM plan apart from the unbundled parking will be implemented by the Town of Oakville and the applicant. It will be the responsibility of the applicant to notify the Town of Oakville upon occupation of the proposed development to coordinate for the distribution of information packages and outreach events to discuss the Smart Commute Initiative within Halton Region.

# 11. Roadway Elements

## 11.1 Geometric Elements

### Right-of-Way

Street A is classified as an Avenue/Transit Corridor within the North Oakville Secondary Plan with a maximum 22-metre right-of-way. Street A is proposed to be designed with a 22-metre right-of-way, satisfying the North Oakville Urban Design Guidelines.

Street B and Street C are also identified as Avenue/Transit corridors with a maximum of 22-metre rights-of-way. Both Street B and Street C are proposed at 22 metre right-of-way with the exception of some short sections which reduce the right-of-way to 19 metres over proposed Natural Heritage System (NHS) crossings. GHD previously prepared a technical memorandum, dated May 2021, in which justification was provided for the proposed design the two NHS crossings (Streets B and C) with a 19-metre right-of-way. The 19-metre right-of-way is consistent with the Town’s Connector/Transit Corridor that are designed to serve relatively low volumes of intra-neighbourhood travel.

All remaining roadways are not identified on the North Oakville Secondary Plan and are considered to be local roads with 17-metre right-of-way which satisfies the North Oakville Urban Design Guidelines

### Daylight Triangle

Requirements for daylight triangles are found in Section 2.7, Table 6 of the Terms of Reference for Transportation Impact Studies and Transportation Functional Design Studies, with the requirements based on the road types that are intersecting each other. The requirements for all intersecting road types within the study area are as follows:

- Avenue/Connector to Avenue/Connector: 7.5m x 7.5m (The intersection of Street A and Burnhamthorpe Road East)
- Avenue/Connector/Local to Local: 3.5m x 3.5m (All remaining internal intersections)

All intersections within the Joshua Creek North lands will be designed to meet the Town’s requirements.

### Corner Clearance

Driveway locations have not been finalized, however all driveways will be designed to be located outside of the daylighting triangles as well as with a corner clearance of at least 2 metres from adjacent intersection curb radii.

## 11.2 Intersection Spacing

A total of six roadways are proposed to intersect Burnhamthorpe Road East from the proposed Joshua Creek North subdivision with three roads proposed to be located either side of the Natural Heritage Systems and is generally consistent with the road network identified through the Burnhamthorpe Road Study and Class EA.

The recommended location and spacing of intersections are provided in Section 9.4.2 of the TAC manual with the recommendation of 60 metres along collector roadways provided in Section 9.4.2.2. Based on the North Oakville East Transportation Plan, it is assumed that the classification of Burnhamthorpe Road East as an Avenue/Transit Corridor is generally consistent with the classification as a collector roadway.

The following summarizes the spacing between each intersection along Burnhamthorpe Road East, measured from centreline to centreline:

- On the west side of the Natural Heritage System
  - Street D and E: approximately 70 metres
  - Street D and E: approximately 75 metres
- On the east side of the Natural Heritage System
  - Street L and N: approximately 190 metres
  - Street D and E: approximately 145 metres

The provision of at least 60 metres between the proposed intersections along Burnhamthorpe Road East meet the TAC guidelines.

## 11.3 Traffic Calming Measures

GHD recommends incorporating curb extensions, also known as bulb-outs, on Local and Avenue roads within the proposed subdivision to enhance pedestrian safety and promote traffic calming. Curb extensions are designed as horizontal projections of the curb into the roadway, narrowing the road width and creating a safer, more pedestrian-friendly environment. These features are typically installed at intersections but may also be placed mid-block in areas with anticipated high pedestrian activity, such as near schools, parks, or public trails.

The benefits of curb extensions are several: they reduce vehicle speeds by visually and physically narrowing the road, slow turning vehicles at intersections, and shorten the crossing distance for pedestrians, improving their visibility to drivers. They also prevent vehicles from parking too close to intersections, ensuring better sightlines for all road users.

Typically, curb extensions are recommended for long, straight, and uninterrupted sections of roadways exceeding 300 meters, especially on roads with posted speed limits of 50 kph or higher, as they effectively break up the linear road profile and deter speeding. However, while the proposed draft plan does not include such extended straight roadway sections, GHD still recommends strategic implementation of curb extensions at specific locations to maximize safety and connectivity benefits. These locations, identified in **Figure 16** below, target areas with expected pedestrian desire lines near Village Squares or access the trail system to enhance pedestrian safety.

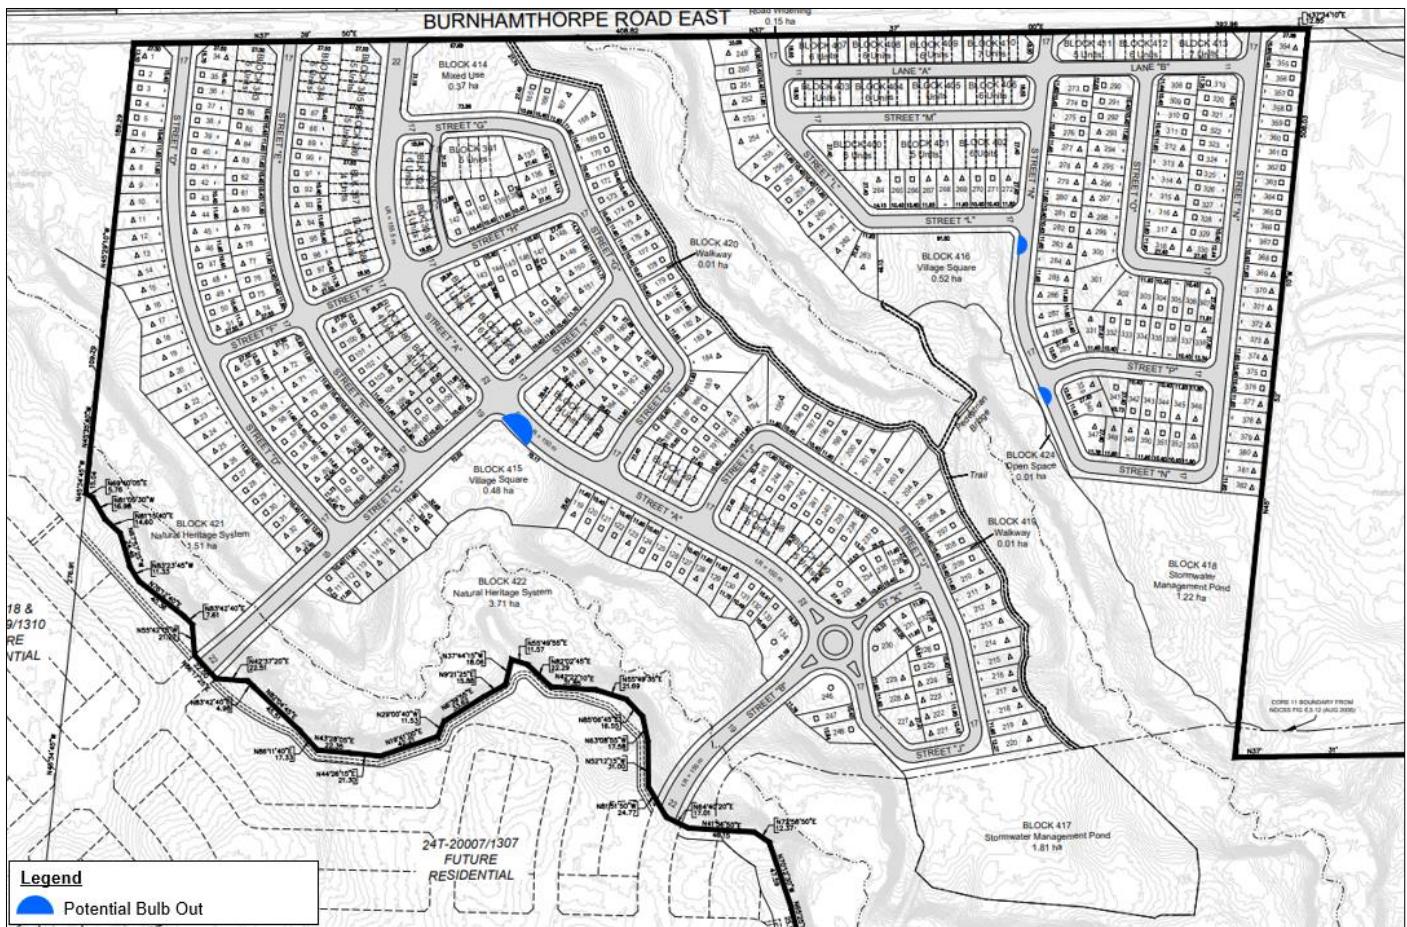

Figure 18 Proposed Traffic Calming Measure Locations

## 11.4 Active Transportation and Trail Connectivity

Outside of the study area, a multi-use path is currently provided along the north side of William Halton Parkway.

West of Trafalgar Road, Wheat Boom Drive continues to have a signed bike route, as well as North Park Boulevard (the continuation of Threshing Mill Boulevard west of Sixth Line). These two routes continue west until they connect with the multi-use trail and bike lane provided at Neyagawa Boulevard.

With the series of cycling infrastructure provided outside of the study area and their connections to other cycling routes, it is recommended to connect the signed routes along Threshing Mill Boulevard and Wheat Boom Drive on both sides of Trafalgar Road along their respective future connections within the proposed subdivision.

The proposed pedestrian and cyclist facilities and for the subdivision including major trails are illustrated in **Figure 19** below.

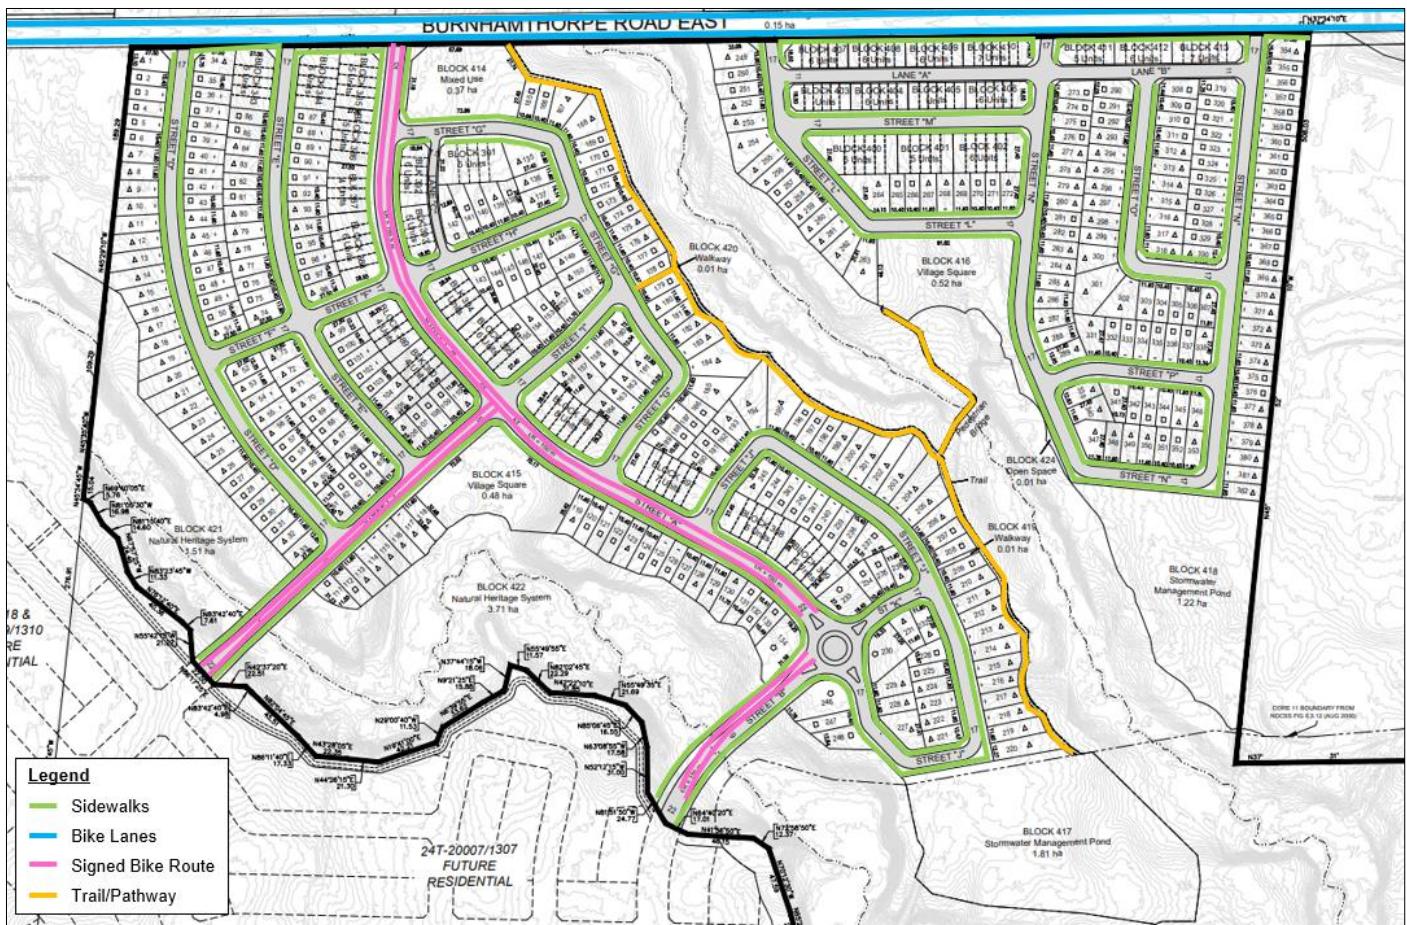

Figure 19 Proposed Pedestrian and Cycling Facilities

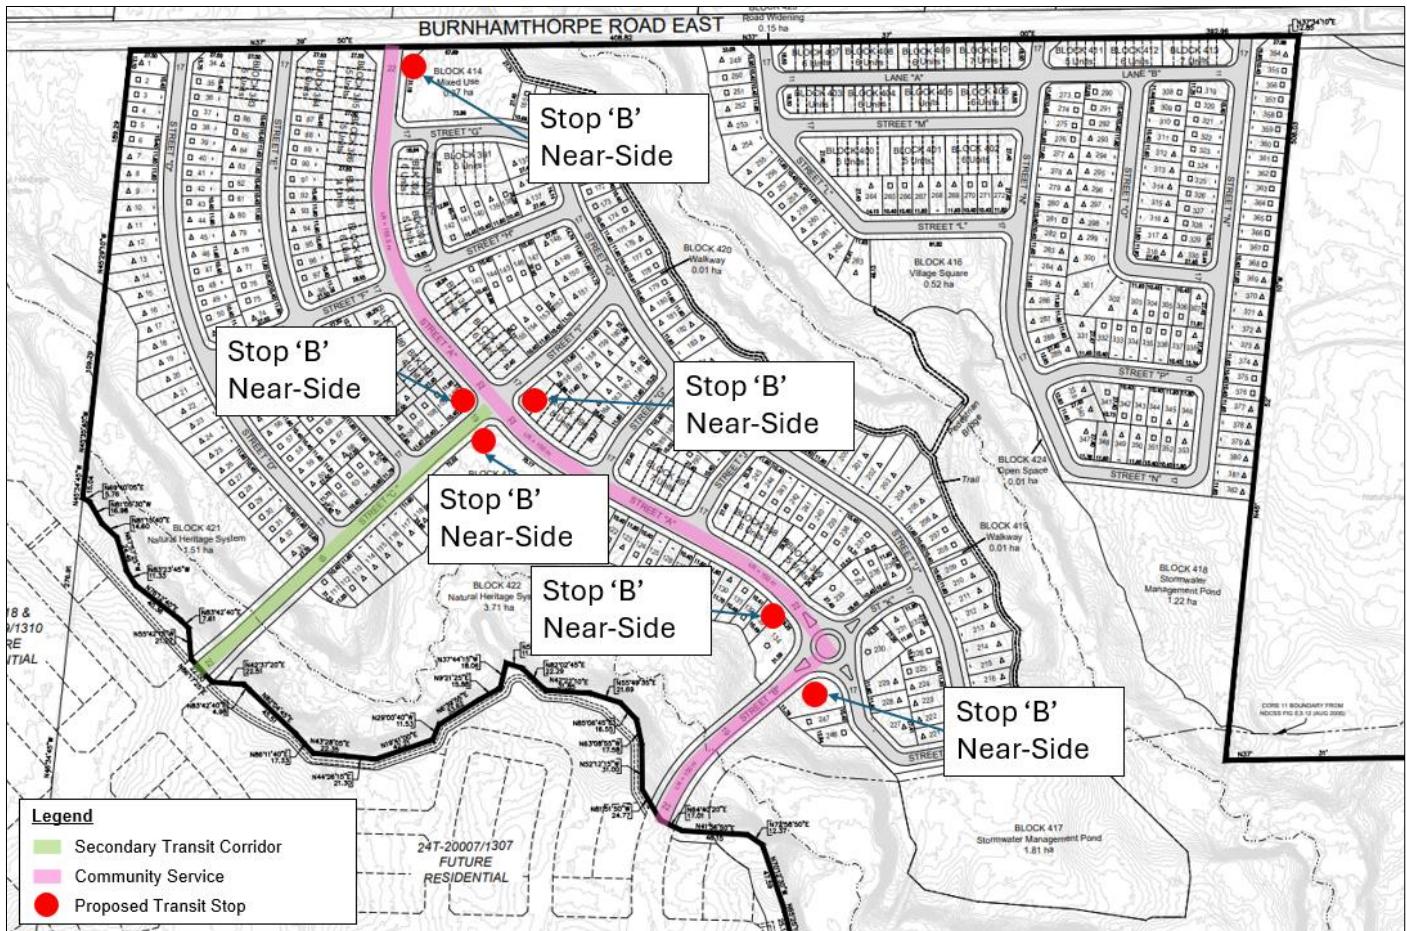

## 11.5 Future Transit Routes/Stops

GHD conducted a thorough review of the North Oakville East Secondary Plan's Transportation Plan to identify designated transit corridors within the proposed development and determine appropriate locations for potential transit stops. This analysis was guided by the scoring framework outlined in the North Oakville Transit Plan, which awards points based on factors such as accessibility, proximity to key destinations, and integration with the broader transit network. A total of six transit stops, each receiving the maximum score of 10 points, have been identified and are shown on **Figure 18**.

The proposed transit stops are strategically located along key transit corridors within the subject lands to optimize coverage and accessibility. These stops include:

- Northbound near-side transit stop at Burnhamthorpe Road East and Street A
- Northbound, southbound, and eastbound near-side transit stops at Street A and Street C/Street I
- Eastbound and southbound near-side transit stops at Street A/Street J and Street B/Street K.

These transit stop locations were selected to ensure that most residences within the development are within walking distance of public transit, enhancing mobility and reducing reliance on private vehicles. Additionally, the stops have been planned with accessibility in mind, with features such as shelters and/or seating. However, with no internal vehicle connection of the NHS connecting the west and east blocks of the development, it is expected that residents of the east block will have to walk over to the nearest transit stops at Street A and Street C unless a future transit stop is provided on Burnhamthorpe Road closure to the block.

**Figure 20      Transit Facilities Plan**

Stop B transit stops area identified as "Info" stops, with each stop designed to include a bench, lighting, power pedestal, and a wheelchair landing pad.

## 12. Conclusion

A Draft Plan of Subdivision prepared by Korsiak Urban Planning consists of a total 556 dwelling units, consisting of 382 single detached dwelling units and 174 townhouse dwelling units

Access to the Joshua Creek North lands is proposed via six new proposed roads (Streets A, D, E, L, and two legs of Street N)

Based on ITE Trip Generation rates, the subject site is expected to generate a total of 306 two-way vehicle trips during the a.m. peak hour consisting of 76 inbound and 230 outbound trips. During the p.m. peak hour, it is expected to generate 400 new two-way vehicle trips consisting of 248 inbound and 152 outbound trips.

Under existing traffic conditions, all intersections are operating at acceptable v/c ratios and levels of service during the a.m. peak and p.m. peak hours, with the exception of:

- William Halton Parkway and Burnhamthorpe Road East

Under the 2031 and 2036 future background and future total traffic conditions, with the addition of corridor growth, background development traffic, the redistribution of some of the background development traffic, the addition of site traffic from the proposed development, and signal improvements, all intersections are operating at acceptable v/c ratios and levels of service during the a.m. peak and p.m. peak hours with the exception of:

- Trafalgar Road and Burnhamthorpe Road East
- William Halton Parkway and Burnhamthorpe Road East
- William Halton Parkway/Burnhamthorpe Road West and Ninth Line

Due to the significant amount of traffic added to the study intersections through corridor growth and the redistribution of background traffic GHD completed a sensitivity analysis for the intersection of William Halton Parkway and Burnhamthorpe Road East to identify the required lane configuration and traffic controls under the future horizon years. The sensitivity analysis included widening William Halton Parkway to a four-lane cross-section (consistent with the Region's Class EA) and signalizing the intersection. A signal warrant was completed for the intersection under the 2031 Future Background condition and confirmed that signalization was warranted.

Under the ultimate horizon year, with the implementation of the planned and proposed improvements, the intersection continues to operate with some movements at critical levels, however all movements operate below capacity and with reduced delays and queuing compared to the analysis with existing lane configurations and traffic controls. The Region should continue to monitor the operation of Regional roadways to determine when improvements become warranted.

TDM measures are proposed for the development that include pedestrian and cycling connections to encourage residents to explore alternatives to reduce single-occupant vehicle trips

Application of the Town of Oakville Zoning By-Law 2009-189 parking rates to the subject site results in a requirement of a minimum of 938 parking spaces. Each single and semi-detached dwelling unit will contain a minimum of two parking spaces (one in the garage and one in the driveway) while the townhouse dwelling units are proposed to contain at least one parking space, satisfying the Town's requirement.

The traffic study confirms that the proposed residential development can be accommodated within the existing and planned road network without significant negative effects on traffic flow, capacity, or safety.

Hello,

GHD Inc. has been retained to prepare a Transportation Impact Study for a proposed residential development on lands located south of Burnhamthorpe East between Trafalgar Road and Ninth Line in the Town of Oakville.

The proposed development will consist of a total of 382 single detached dwelling units and 174 townhouse dwelling units. Access to the subject lands is proposed via six new north/south roadways intersecting Burnhamthorpe Road East as well as through connections to the lands to the south.

In order to properly scope this project, we ask that the Region and Town review and provide comments on the following scope and provide any additional items required as part of the study.

## Study intersections

- Existing
    - Trafalgar Road and Burnhamthorpe Road East
    - Burnhamthorpe Road East and William Halton Parkway
    - William Halton Parkway and Ninth Line
  - Future
    - Burnhamthorpe Road East and Street A
    - Burnhamthorpe Road East and Street D
    - Burnhamthorpe Road East and Street E
    - Burnhamthorpe Road East and Street L
    - Burnhamthorpe Road East and Street N (west leg)

- Burnhamthorpe Road East and Street N (east leg)
- Street C and Street D
- Street A/J and Street B/K

## Traffic Data

Updated traffic counts at the existing study intersections will be undertaken during the a.m. and p.m. peak hours.

## Study Peak Hours

Weekday a.m. and p.m. peak hours

## Study Horizon Year

2024 (existing), build-out and five years post build-out and 2029 (five years from the date of the study), as per the Region's TIS Guidelines.

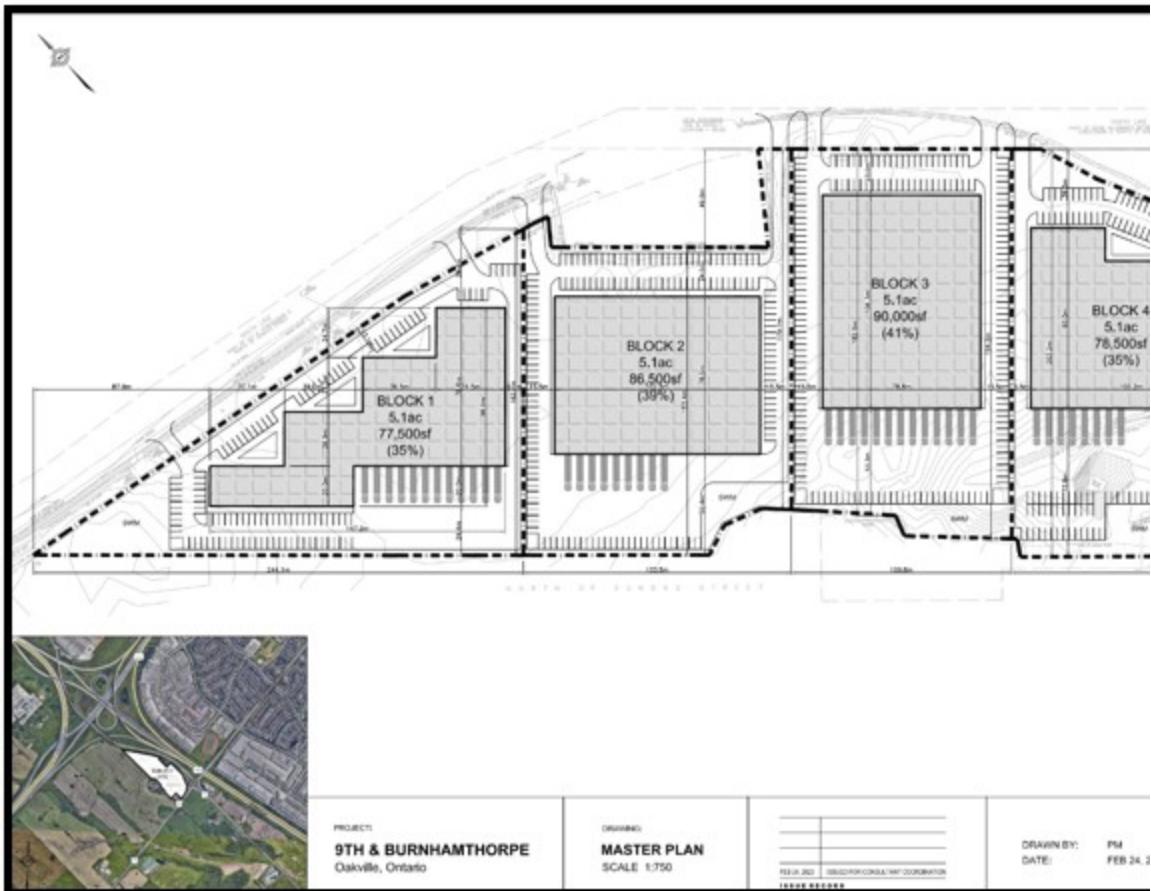

## Background Growth Rate

GHD will consult with Region staff and Town staff to determine the growth rates to be used. **[AK]** (3.5%)

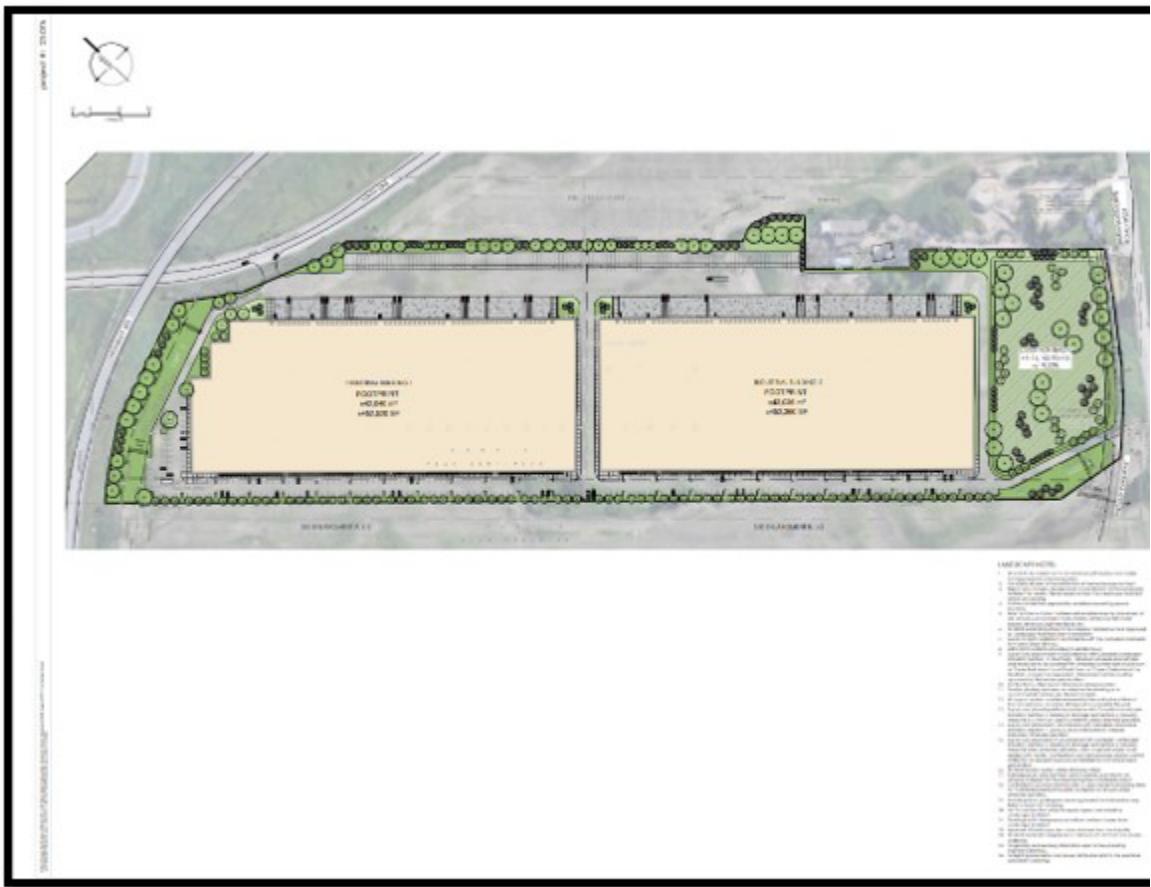

## Background Development Traffic

The following developments will be included as background developments:

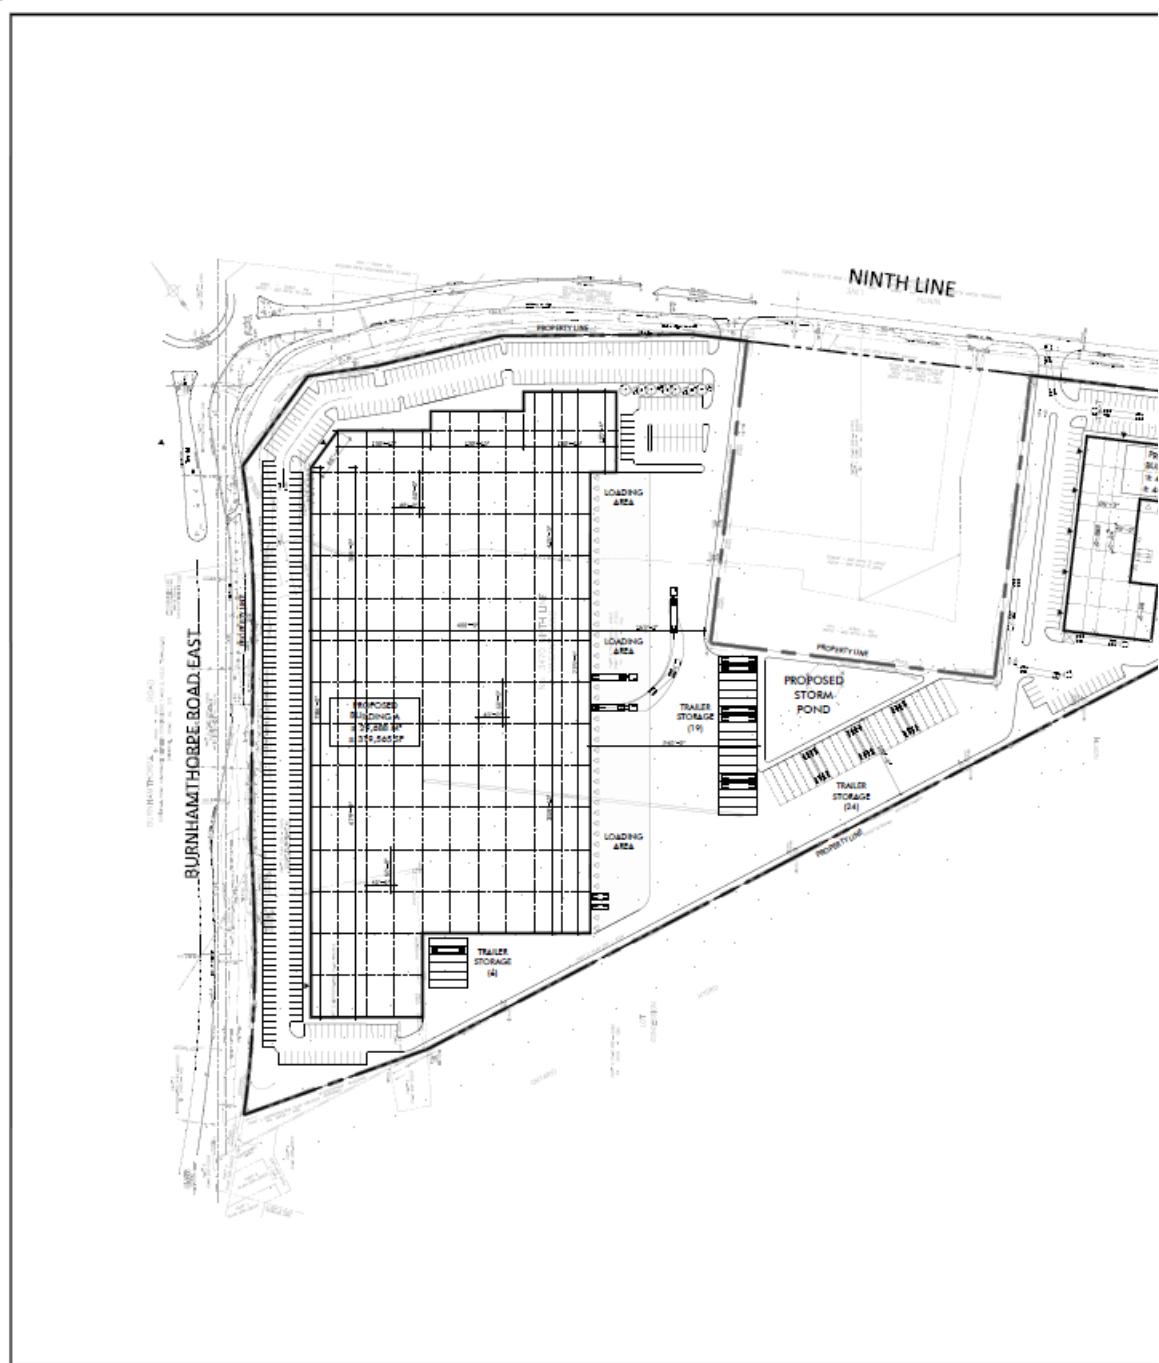

- Rampen Holdings Inc. (1086 Burnhamthorpe Road East)
- Mattamy (Joshua Creek) Limited - Phase 3 - Z.1307.07 and 24T-20007/1307
- 1187 Burnhamthorpe Rd. E Oakville
- Infrastructure Ontario - 4233, 4040 and 4180 Trafalgar Road - OPA 1213.01
- Calculation would be required for the following upcoming developments. 1<sup>st</sup> two (2) are located in the northwest quadrant of Burnhamthorpe Rd & Ninth Line.
  - ❖ Description: Proposed 4 employment/industrial office buildings, total GFA of 30,890 m<sup>2</sup>

- ❖ Description: To permit and construct two industrial warehouse buildings ( $84,066\text{m}^2$ ),

- ❖ Description: To permit and construct two industrial warehouse buildings (35,000 m<sup>2</sup>), located in the southwest quadrant of the Burnhamthorpe Rd W / William Halton Parkway / Ninth Line intersection.

Town staff have also identified two developments located near the roundabout of William Halton Parkway and Ninth Line. Town staff will provide information relating to GFA, LUC, and the location of the accesses so GHD can include these developments.

### **Trip Generation**

Will be completed using rates published by the ITE Trip Generation 11th Edition, LUC 210 and 215 (Single Family Detached and Attached Housing).

Town staff have requested that trip assignment for the Joshua Creek Phase 3 assume that 50% of site trips will head north to Burnhamthorpe, site trips for the subject site will assume that only 10% of site trips will head south to Dundas Street.

The directional distribution of traffic approaching and departing the site will be determined based on the TTS 2016 data, existing local patterns, and first principles.

The analysis will identify the transportation system requirements and other measures required to ensure the acceptable operation of the study intersections, including auxiliary turning lanes and other transportation infrastructure improvements.

TAC, Region, and Town guidelines will be reviewed in order to complete an access management. Review for the site access that reviews corner clearance, driveway spacing, auxiliary lanes, corner radii, and clear throat distance.

The parking supply will be reviewed in accordance with the Town's Zoning By-law.**[AK]** - please include an on-street parking map with anticipated location of hydrants.

**[AK]** - Please include the following in the report:

- ❖ A traffic calming section
- ❖ An internal functional review
- ❖ Intersection spacing validity
- ❖ Future/Proposed Transit locations
- ❖ Active Transportation Section
- ❖ TDM measures

If the above scope is acceptable to the Town and Region, it will form the basis of our scope of work.

Thank you,

Raf

# **Appendix D**

## **Background Development Excerpts**

**Rampen Holdings Inc.**

For the purposes of this assessment and consistent with other background traffic impact studies prepared for other developments in the area, the *Trip Generation Manual, 11<sup>th</sup> Edition* published by the Institute of Transportation Engineers (ITE) and 2016 TTS information will be utilized in this Study.

## 5.2. Non-auto Modal Split

As the majority of the area north of Dundas Street E is still under construction, the 2016 Transportation Tomorrow Survey data for existing traffic zones north of Dundas Street will not be representative. For these reasons, the traffic zones located south of Dundas Street E will be selected for analysis as these are stable communities. **Table 5** summarizes the travel mode split information based on the review of the 2016 Transportation Tomorrow Survey data for Traffic Zones 4033 and 4035. The 2016 TTS data extraction is included in **Appendix E**.

**Table 6 – Modal Split based on 2016 TTS Data for Traffic Zones**

Time	Trips Made by Traffic Zones				
	Auto Driver	Auto Passenger	Transit	Cycle	Walk
AM Peak Period (6:00AM – 9:00AM)	68%	17%	7%	0%	8%
PM Peak Period (4:00PM – 7:00PM)	74%	17%	8%	0%	1%

Based on the information above, the non-auto mode of transportation (transit + walking + carpooling) accounts for near 32% during the morning peak period and 26% during the afternoon peak period. Although this is a great trend, however, the auto driver mode is still very high, which is not sustainable and does not meet the sustainable objective of the Town Official Plan policies and directions. In addition, there are none or very little bicycle trips, despite there are existing cycling facilities.

NexTrans' review of the background traffic impact studies, especially the GHD report, and understands that the Regional staff would support some non-auto modal split for the area, potentially 10% transit, 5% active transportation and 3% transportation demand management. This was stated in the terms of reference prepared by GHD for the Joshua Creek Phase 3. However, to be conservative, **NexTrans has not used this modal split in the trip generation analysis**. Therefore, both of these provisions will address the Town's comment to verify that the Regional staff support 18% modal split for the area.

## 5.3. Site Trip Generation

The ITE Trip Generation Manual 11<sup>th</sup> Edition Land Use Codes (LUC) 201 "Single-Family Detached Housing General Urban/Suburban" and LUC 215 "Single-Family Attached Housing General Urban/Suburban" fitted curve equations have been utilized for the proposed development. The site trip generation is summarized in **Table 6**.

**Table 7 – Site Traffic Trip Generation Based on ITE Trip Rates (11<sup>th</sup> Edition)**

ITE Land Use	Magnitude (units)	Parameters	Morning Peak Hour			Afternoon Peak Hour		
			In	Out	Total	In	Out	Total
Single-Family Detached Housing LUC 210 General Urban/Suburban	132	Trip Rates AM - $\ln(T) = 0.91\ln(X) + 0.12$ PM - $\ln(T) = 0.94\ln(X) + 0.27$	0.19	0.54	0.73	0.62	0.36	0.98
		<b>Sub-Total Trips</b>	25	71	96	81	48	129
Single-Family Attached Housing LUC 215 General Urban/Suburban	56	Trip Rates AM - $T = 0.52^*(X) - 5.70$ PM - $T = 0.60^*(X) - 3.93$	0.13	0.28	0.41	0.31	0.23	0.54
		<b>Sub-Total Trips</b>	7	16	23	17	13	30
<b>Total Trips</b>			32	87	119	98	61	159

Based on the analysis noted above, the proposed development is expected to generate a total of 119 two-way auto trips (33 inbound and 87 outbound) and 159 two-way auto trips (98 inbound and 61 outbound) during the morning and afternoon peak hours, respectively.

# **Joshua Creek Phase 3**

# 5. Site Generated Traffic

## 5.1 Site Traffic Generation

The proposed Joshua Creek Phase 3 residential development consists of a total of 709 Single Detached units, 306 Townhouse units, and a 700-student elementary school. The development generated traffic was estimated using the rates provided in the Institute of Transportation Engineer's (ITE) Trip Generation Manual, 11<sup>th</sup> Edition using Land Use Code (LUC) 210 (Single-Family Detached Housing for the Single Detached units and LUC 215 (Single-Family Attached Housing) for the Townhouse units.

Consistent with other traffic studies completed in the areas, Region of Halton staff confirmed that a 10% mode split could be assumed for the transit modal split, 5% for active transportation and 3% for Transportation Demand Management (TDM) in the area for the 2027 planning horizon. As a result, an 18% total mode split reduction was applied to all residential inbound and outbound site generated traffic during both peak hours from the calculated site trips estimated by the ITE trip rates.

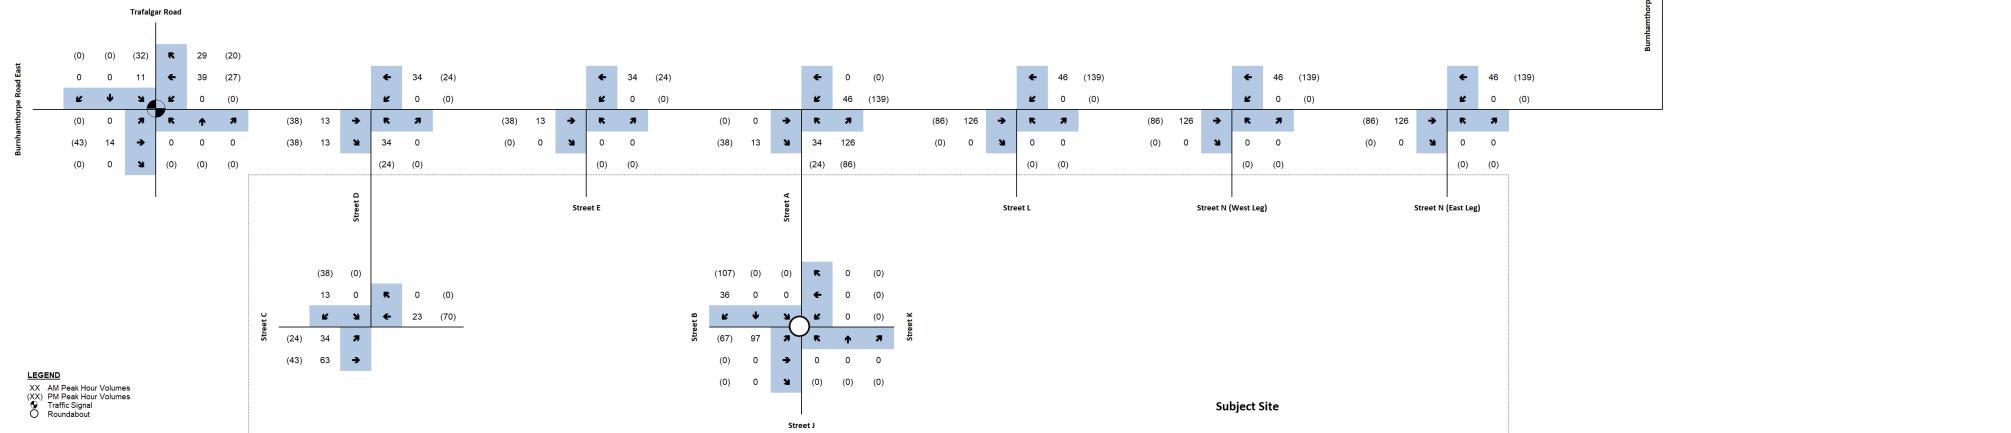

No reduction was applied for the elementary school as most trips will be local. A comparison of the fitted curve equations and average rates for each individual Land Use Code was completed, therefore whichever calculation resulted in a greater trip generation was applied as a conservative measure.

**Table 5-1** below summarizes the estimated trip generation for the subject site.

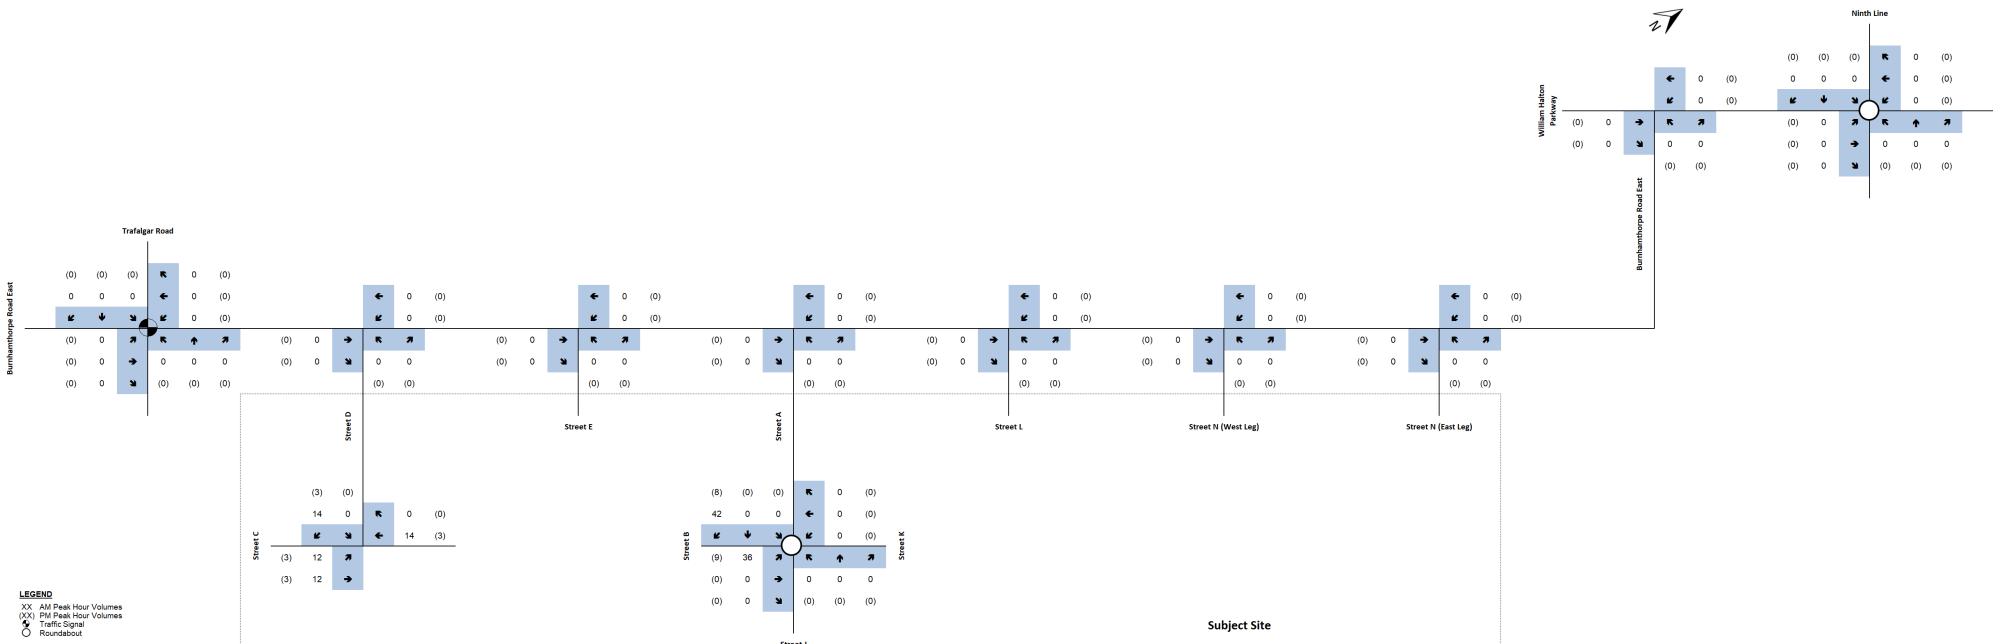

*Table 5-1 Estimated Joshua Creek Phase 3 Site Trips*

Land Uses	GFA (Dwelling Units)	Parameters	Peak Hour						
			Weekday AM			Weekday PM			
			In	Out	Total	In	Out	Total	
Single Family Detached (LUC 210)	709 units	Trip Ratio	26%	74%	100%	63%	37%	100%	
		Gross Trips	129	367	496	420	246	666	
		Total Mode Split Reduction (18%)	23	66	89	76	44	120	
		<b>Total New Trips</b>	<b>106</b>	<b>301</b>	<b>407</b>	<b>344</b>	<b>202</b>	<b>546</b>	
Single Family Attached (LUC 215)	306 units	Trip Ratio	31%	69%	100%	57%	43%	100%	
		Gross Trips	46	107	153	103	77	180	
		Total Mode Split Reduction (18%)	9	19	28	18	14	32	
		<b>Total New Trips</b>	<b>37</b>	<b>88</b>	<b>125</b>	<b>85</b>	<b>63</b>	<b>148</b>	
Elementary School (LUC 520)	700 Students	Trip Ratio	54%	46%	100%	46%	54%	100%	
		Gross Trips	280	238	518	52	60	112	
		Total Mode Split Reduction (0%)	0	0	0	0	0	0	
		<b>Total New Trips</b>	<b>280</b>	<b>238</b>	<b>518</b>	<b>52</b>	<b>60</b>	<b>112</b>	
			<b>Total Primary Trips</b>	<b>423</b>	<b>627</b>	<b>1050</b>	<b>481</b>	<b>325</b>	<b>806</b>

The proposed subdivision is expected to generate a total of 1050 new two-way trips consisting of 423 inbound and 627 outbound trips during weekday a.m. peak hour and 806 new two-way trips consisting of 81 inbound and 325 outbound trips during the weekday p.m. peak hour.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Intersection LOS and Intersection Delay are demand-weighted averages.

## File summary

### File Description

Title	Joshua Creek Dryland TIS
Location	Oakville
Site number	
Date	11/18/2024
Version	
Status	
Identifier	
Client	
Jobnumber	
Analyst	GHDNET\hcheng4
Description	

## Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin

## Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Show lane queues in feet / metres	Show all PICADY stream intercepts	Calculate residual capacity	V/C Ratio Threshold	Average Delay threshold (s)	Queue threshold (PCE)	Use simulation for HCM roundabouts	Use iterations for HCM roundabouts	Max number of iterations for roundabouts
5.75	✓					0.85	36.00	20.00		✓	500

## Data Errors and Warnings

Severity	Area	Item	Description
Warning	Pedestrian Crossing	A - Ninth Line South - Pedestrian crossing	Pedestrian crossing uses default flow of 0. Is this correct?
Warning	Pedestrian Crossing	B - Burnhamthorpe Road West - Pedestrian crossing	Pedestrian crossing uses default flow of 0. Is this correct?
Warning	Pedestrian Crossing	C - Ninth Line North - Pedestrian crossing	Pedestrian crossing uses default flow of 0. Is this correct?
Warning	Pedestrian Crossing	D - William Halton Parkway - Pedestrian crossing	Pedestrian crossing uses default flow of 0. Is this correct?
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

## Analysis Set Details

ID	Name	Include in report	Network flow scaling factor (%)	Network capacity scaling factor (%)

Warning	Pedestrian Crossing	C - Ninth Line North - Pedestrian crossing	Pedestrian crossing uses default flow of 0. Is this correct?
Warning	Pedestrian Crossing	D - William Halton Parkway - Pedestrian crossing	Pedestrian crossing uses default flow of 0. Is this correct?
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

## Analysis Set Details

ID	Name	Include in report	Network flow scaling factor (%)	Network capacity scaling factor (%)
A2	Y-Intercept 85%	✓	100.000	100.000

## Intersection Network

### Intersections

Intersection	Name	Intersection type	Use circulating lanes	Leg order	Intersection Delay (s)	Intersection LOS
1	William Halton Parkway / Burnhamthorpe Road / Ninth Line	Standard Roundabout		A, B, C, D	255.79	F

### Intersection Network

Driving side	Lighting	Network delay (s)	Network LOS
Right	Normal/unknown	255.79	F

## Legs

### Legs

Leg	Name	Description	No yield line
A	Ninth Line South		
B	Burnhamthorpe Road West		
C	Ninth Line North		
D	William Halton Parkway		

### Roundabout Geometry

Leg	V - Approach road half-width (m)	E - Entry width (m)	I' - Effective flare length (m)	R - Entry radius (m)	D - Inscribed circle diameter (m)	PHI - Conflict (entry) angle (deg)	Entry only	Exit only
A - Ninth Line South	7.05	9.24	16.6	37.0	61.7	6.0		
B - Burnhamthorpe Road West	7.52	9.72	19.9	29.4	61.7	20.0		
C - Ninth Line North	6.33	8.37	13.1	43.2	61.7	11.0		
D - William Halton Parkway	7.10	8.79	20.3	34.9	61.7	31.0		

### Unsignalled Pedestrian Crossing Crossings

Leg	Space between crossing and intersection entry (Unsignalled Pedestrian Crossing) (PCE)	Vehicles queueing on exit (Unsignalled Pedestrian Crossing) (PCE)	Central Refuge	Crossing data type	Crossing length (m)	Crossing time (s)
A - Ninth Line South	8.70	1.00		Distance	10.00	7.14
B - Burnhamthorpe Road West	10.10	1.00		Distance	9.24	6.60
C - Ninth Line North	9.24	1.00		Distance	9.94	7.10
D - William Halton Parkway	7.06	1.00		Distance	10.70	7.64

### Slope / Intercept / Capacity

#### Leg Intercept Adjustments

Leg	Type	Reason	Percentage intercept adjustment (%)
A - Ninth Line South	Percentage		85.00
B - Burnhamthorpe Road West	Percentage		85.00
C - Ninth Line North	Percentage		85.00
D - William Halton Parkway	Percentage		85.00

#### Roundabout Slope and Intercept used in model

Leg	Final slope	Final intercept (PCE/hr)
A - Ninth Line South	0.776	2446
B - Burnhamthorpe Road West	0.767	2474
C - Ninth Line North	0.715	2164
D - William Halton Parkway	0.705	2210

The slope and intercept shown above include any corrections and adjustments.

#### Leg Capacity Adjustments

Leg	Type	Reason	Percentage capacity adjustment (%)
A - Ninth Line South	Percentage		100.00

## Traffic Demand

#### Demand Set Details

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically
DPFT36	2036 Total	PM	ONE HOUR	17:00	18:30	15	✓

#### Demand overview (Traffic)

Leg	Linked leg	Profile type	Use O-D data	Average Demand (Veh/hr)	Scaling Factor (%)
A - Ninth Line South		ONE HOUR	✓	1738	100.000
B - Burnhamthorpe Road West		ONE HOUR	✓	1421	100.000
C - Ninth Line North		ONE HOUR	✓	725	100.000
D - William Halton Parkway		ONE HOUR	✓	1343	100.000

#### Demand overview (Pedestrians)

Leg	Profile type	Average pedestrian flow (Ped/hr)
A - Ninth Line South	[ONEHOUR]	0.00
B - Burnhamthorpe Road West	[ONEHOUR]	0.00
C - Ninth Line North	[ONEHOUR]	0.00
D - William Halton Parkway	[ONEHOUR]	0.00

## Origin-Destination Data

**Demand (Veh/hr)**

	To				
	A - Ninth Line South	B - Burnhamthorpe Road West	C - Ninth Line North	D - William Halton Parkway	
From	A - Ninth Line South	0	359	815	564

*There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.*

*Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Intersection LOS and Intersection Delay are demand-weighted averages.*

## File summary

### File Description

Title	Joshua Creek Dryland TIS
Location	Oakville
Site number	
Date	11/18/2024
Version	
Status	
Identifier	
Client	
Jobnumber	
Analyst	GHDNET\hcheng4
Description	

## Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin

## Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Show lane queues in feet / metres	Show all PICADY stream intercepts	Calculate residual capacity	V/C Ratio Threshold	Average Delay threshold (s)	Queue threshold (PCE)	Use simulation for HCM roundabouts	Use iterations for HCM roundabouts	Max number of iterations for roundabouts
5.75	✓					0.85	36.00	20.00		✓	500

# Y-Intercept 100% - 2031 Background, AM

## Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		Truck% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If Truck% at the intersection is genuinely zero, please ignore this warning.
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

## Analysis Set Details

ID	Name	Include in report	Network flow scaling factor (%)	Network capacity scaling factor (%)
A1	Y-Intercept 100%	✓	100.000	100.000

## Intersection Network

### Intersections

Intersection	Name	Intersection type	Use circulating lanes	Leg order	Intersection Delay (s)	Intersection LOS
2	Internal Roundabout	Standard Roundabout		J, K, A, B	2.30	A

### Intersection Network

Driving side	Lighting	Network delay (s)	Network LOS
Right	Normal/unknown	2.30	A

## Legs

### Legs

Leg	Name	Description	No yield line
J	Street J		
K	Street K		
A	Street A		
B	Street B		

## Roundabout Geometry

Leg	V - Approach road half-width (m)	E - Entry width (m)	I' - Effective flare length (m)	R - Entry radius (m)	D - Inscribed circle diameter (m)	PHI - Conflict (entry) angle (deg)	Entry only	Exit only
J - Street J	3.33	5.15	3.2	20.3	18.0	12.3		
K - Street K	3.35	4.17	9.9	18.0	18.0	41.8		
A - Street A	6.34	6.34	0.0	20.8	18.0	22.2		
B - Street B	5.33	5.33	0.0	20.8	18.0	35.0		

## Slope / Intercept / Capacity

### Leg Intercept Adjustments

Leg	Type	Reason	Percentage intercept adjustment (%)
J - Street J	Percentage		100.00
K - Street K	Percentage		100.00
A - Street A	Percentage		100.00
B - Street B	Percentage		100.00

### Roundabout Slope and Intercept used in model

Leg	Final slope	Final intercept (PCE/hr)
J - Street J	0.598	1280
K - Street K	0.538	1155
A - Street A	0.731	1976
B - Street B	0.638	1590

The slope and intercept shown above include any corrections and adjustments.

## Traffic Demand

### Demand Set Details

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically
DAFB31	2031 Background	AM	ONE HOUR	08:00	09:30	15	✓

## Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		Truck% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If Truck% at the intersection is genuinely zero, please ignore this warning.
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

## Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		Truck% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If Truck% at the intersection is genuinely zero, please ignore this warning.
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

Right	Normal/unknown	2.58	A

## Legs

### Legs

Leg	Name	Description	No yield line
J	Street J		
K	Street K		
A	Street A		
B	Street B		

## Roundabout Geometry

Leg	V - Approach road half-width (m)	E - Entry width (m)	I' - Effective flare length (m)	R - Entry radius (m)	D - Inscribed circle diameter (m)	PHI - Conflict (entry) angle (deg)	Entry only	Exit only
J - Street J	3.33	5.15	3.2	20.3	18.0	12.3		
K - Street K	3.35	4.17	9.9	18.0	18.0	41.8		
A - Street A	6.34	6.34	0.0	20.8	18.0	22.2		
B - Street B	5.33	5.33	0.0	20.8	18.0	35.0		

## Slope / Intercept / Capacity

### Leg Intercept Adjustments

Leg	Type	Reason	Percentage intercept adjustment (%)
J - Street J	Percentage		85.00
K - Street K	Percentage		85.00
A - Street A	Percentage		85.00
B - Street B	Percentage		85.00

### Roundabout Slope and Intercept used in model

Leg	Final slope	Final intercept (PCE/hr)
J - Street J	0.598	1088
K - Street K	0.538	982
A - Street A	0.731	1680
B - Street B	0.638	1351

The slope and intercept shown above include any corrections and adjustments.

## Traffic Demand

### Demand Set Details

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically
DPFB36	2036 Background	PM	ONE HOUR	17:00	18:30	15	✓

### Demand overview (Traffic)

Leg	Linked leg	Profile type	Use O-D data	Average Demand (Veh/hr)	Scaling Factor (%)
J - Street J		ONE HOUR	✓	5	100.000
K - Street K		ONE HOUR	✓	4	100.000
A - Street A		ONE HOUR	✓	127	100.000
B - Street B		ONE HOUR	✓	87	100.000

## Origin-Destination Data

### Demand (Veh/hr)

	To				
	J - Street J	K - Street K	A - Street A	B - Street B	
From	J - Street J	0	0	3	2
	K - Street K	0	0	2	2
	A - Street A	5	2	0	120
	B - Street B	2	2	83	0

## Vehicle Mix

Truck data entry mode	PCE Factor for a Truck (PCE)
Truck Percentages	2.00

### Heavy Vehicle %

	To				
	J - Street J	K - Street K	A - Street A	B - Street B	
From	J - Street J	0	0	0	0
	K - Street K	0	0	0	0
	A - Street A	0	0	0	0
	B - Street B	0	0	0	0

## Results

### Results Summary for whole modelled period

Leg	Max V/C Ratio	Max Delay (s)	Max Queue (Veh)	Max 95th percentile Queue (Veh)	Max LOS	Average Demand (Veh/hr)	Total Intersection Arrivals (Veh)
J - Street J	0.01	3.51	0.0	0.5	A	5	7
K - Street K	0.00	0.00	0.0	~1	A	0	0
A - Street A	0.08	2.34	0.1	0.5	A	117	175
B - Street B	0.07	2.88	0.1	0.5	A	80	120

# Y-Intercept 85% - 2036 Total, PM

## Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		Truck% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If Truck% at the intersection is genuinely zero, please ignore this warning.
Warning	Queue variations	Analysis Options	Queue percentiles may be unreliable if the mean queue in any time segment is very low or very high.

## Analysis Set Details

ID	Name	Include in report	Network flow scaling factor (%)	Network capacity scaling factor (%)
A2	Y-Intercept 85%	✓	100.000	100.000

# **Appendix F**

## **Signal Warrants**

# Input Data Sheet

Project No. & Description	Joshua Creek North				
Intersecting roadways:	William Halton Parkway and Burnhamthorpe Road East				
Analysis Period:	Future Background 2031				
Date of Signal Warrant Analysis:	November 21, 2024				
Analyst:	GHD				
Direction of the Main Road / Street:	1 East-West	▼	Number of Hourly Volumes Available:	2 AM & PM Peak Hour Volumes	▼

## Justifications 7: Projected Volume Warrants

AM & PM Peak Hour Volumes Available

Both Roads Exist, Development is Future

- A Number of lanes on the Main Road? 2 or more ▼
- B Number of lanes on the Minor Road? 1 ▼
- C How many approaches? 3 (T-Intersection) ▼
- D What is the operating environment? 1 Rural Population < 10,000 AND Speed >= 70 km/hr
- E Is this an existing intersection? 1 Both Intersecting Roads Exist ▼ 120% Warrant without Combination
- F What is the eight hour vehicle volume at the intersection? (Please fill in table below)

Hour Ending	Main Eastbound Approach			Minor Northbound Approach			Main Westbound Approach			Minor Southbound Approach			Pedestrians Crossing Main Road
	LT	TH	RT	LT	TH	RT	LT	TH	RT	LT	TH	RT	
8:45	0	1,031	2	1	0	347	171	579	0	0	0	0	0
17:00	0	652	3	0	0	398	274	1,401	0	0	0	0	0
AHV*	0	421	1	0	0	186	111	495	0	0	0	0	0
Total 8 Hour Volumes**	0	4,209	11	1	0	1,861	1,111	4,950	0	0	0	0	0

\*For Justification 7: Average Hourly Volumes = AHV = (AM Peak + PM Peak)/4

\*\*For Justification 7: Total 8 Hour Volumes = AM Peak + PM Peak + 6 (AHV)

SIGNAL WARRANTS BASED ON MTO OTM BOOK 12 (2012) METHODOLOGIES

# Analysis Sheet

Joshua Creek North

Intersection: William Halton Parkway and Burnhamthorpe Road East Analysis Period: Future Background 2031

Signal Warrant Analysis Date: November 21, 2024

Analyst: GHD

Both Intersection Roads Exists

## Justification 7-1: Minimum Vehicle Volumes

Free Flow Rural Conditions

Justification	Guidance Approach Lanes				Percentage Warrant								Total Across	Section Percent	
	1 Lanes		2 or More Lanes		Hour Ending										
Flow Condition	FREE FLOW X	RESTR. FLOW X	FREE FLOW ✓	RESTR. FLOW X	AM	PM	AHV								
1A	480	720	600	900	2,131	2,728	1,214	1,214	1,214	1,214	1,214	1,214	1,214		
	COMPLIANCE %				120.0%	120.0%	120.0%	120.0%	120.0%	120.0%	120.0%	120.0%	120.0%	960.0%	120.0%
1B	120	170	120	170	348	398	186	186	186	186	186	186	186
