1. Introduction

EXP Services Inc. has been retained by Rosethorn Developments ("Owner") to prepare a Functional Servicing Report (FSR) in support of an application for an Official Plan and Zoning By-Law Amendment on approximately 0.38 ha of land in the Town of Oakville and Region of Halton. The subject land is municipally known as 1295 Sixth Line. Refer to Figure 1 for site location plan.

The subject lot is currently occupied by a residential unit with driveway access from Sixth Line. The proposed development will include a six-storey apartment building with 70 units within 6,160.4 m^2 of Gross Floor Area (GFA). A total of 80 parking spaces will be provided through one level of underground parking. Refer to the Owner's Site Plan located in Appendix A for reference.

Finally, the objective of this FSR is to give an overview of the proposed servicing strategy for the site including outlining the required demands on the municipal system while addressing any corresponding capacity concerns.

2. Site Characteristics

The development site is 0.38 hectares in size and is bound by Sixth line to the west, a residential apartment building to the south, and the White Oaks secondary school park block to the north and east. The site is located within the Sixteen Mile Creek watershed outside of Conservation Halton's (CH) regulated area. It has also been confirmed to be outside of the Ministry of Transportation Ontario (MTO) controlled area. Refer to figure 1 for Site Location Plan

The application proposed is to redevelop the site into a six (6) storey residential apartment building with 70 new units including one level of underground parking. Driveway access for the proposed residential apartment building will be to Sixth Line. Refer to the Preliminary Site Plan (prepared by Rick Brown and Associates Inc) in Appendix A for additional information.

3. Existing Topography and Proposed Grading

To assess the existing site topography within and surrounding the site, EXP staff reviewed available topographic information of the Town of Oakville GIS mapping and VuMap software. The existing site topography shows elevations falling in the range of approx. 1.5 m from the northeast corner of the property to the southwest corner. Currently, there is a single driveway access to Sixth Line. Refer to the Town of Oakville GIS screenshot which is included in Appendix A for reference.

The proposed grading design generally maintains the existing drainage patterns for the site, while meeting Town of Oakville criteria and ensuring emergency major overland flow is directed west towards Sixth Line and not to the neighbouring property to the north or south.

Overall, the grading design for the site is to be completed in concert with the proposed stormwater management (SWM) strategy for the site which includes a network of high and low points, an underground SWM cistern, and inlets designed to capture and attenuate all storm events up to and including the 100-year storm event and control to the 5-year pre-development levels. For additional grading details refer to the Preliminary Site Servicing and Grading Plan on Figure 2.

GENERAL NOTES:

UNLESS OTHERWISE NOTED ON THIS DRAWING THE FOLLOWING REQUIREMENTS SHALL APPLY.

GENERAL

1. CONSTRUCTION OF SEWERS, AND RELATED APPURTENANCES SHALL BE UNDERTAKEN IN ACCORDANCE WITH THE CURRENT STANDARD DRAWINGS OF THE TOWN OF OAKVILLE, THE REGIONAL MUNICIPALITY OF HALTON, AND THE ONTARIO PROVINCIAL STANDARD DRAWINGS (OPSD).
2. ONTARIO PROVINCIAL STANDARD DRAWINGS TO BE READ IN CONJUNCTION WITH THE REGION OF HALTON REVISIONS.
3. ALL DIMENSIONS ARE IN METRES AND ALL DIAMETERS ARE IN MILLIMETRES UNLESS OTHERWISE NOTED.
4. ALL WORK SHALL BE COMPLETED IN ACCORDANCE WTH "THE OCCUPATIONAL HEALTH & SAFETY ACT". THE GENERAL CONTRACTOR SHALL BE DEEMED TO BE THE CONTRACTOR AS DEFINED IN THE ACT.
5. THE CONTRACTOR SHALL OBTAIN ALL PERMITS FOR CONSTRUCTION.
6. ALL TEMPORARY TRAFFIC CONTROL AND SIGNAGE DURING CONSTRUCTION, PERMANENT SIGNS AND LANE MARKINGS SHALL BE IN ACCORDANCE WITH ONTARIO TRAFFIC MANUAL FOR TEMPORARY CONDITIONS AND MTO MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES.
7. FOR ALL SEWERS AND WATERMAIN IN FILL SECTIONS, THE COMPACTION SHALL BE VERIFIED PRIOR TO LAYING OF PIPE.
8. ALL EXCAVATIONS TO BE BACKFILLED WITH NATIVE MATERIAL, APPROVED BY THE ENGINEER, TO 95% SPD.
9. ALL UNDERGROUND SERVICE CONNECTIONS AND TRENCHES WITHIN PAVED PORTION OF AN EXISTING ROAD ARE TO BE BACKFILLED WITH UNSHRINKABLE MATERIAL.
10. ALTERNATIVE CONSTRUCTION MATERIALS MAY BE ACCEPTABLE, PROVIDED THAT APPROVAL HAS BEEN OBTAINED FROM THE REGIONAL ENGINEER, TOWN OF OAKVILLE AND THE ENGINEER .
11. MUNICIPAL APPROVAL OF THESE DRAWINGS IS FOR MATERIAL AND COMPLIANCE WITH TOWN OF OAKVILLE AND PROVINCIAL SPECIFICATIONS AND STANDARDS ONLY. APPROVAL AND INSPECTION OF THE WORKS BY THE TOWN OF OAKVILLE STAFF DOES NOT CERTIFY THE LINE AND GRADE OF THE WORKS NOR RELIEVE THE CONTRACTOR OF CERTIFICATION OF ALL WORKS BY THE OWNER'S ENGINEER.
12. ALL DIMENSIONS TO BE CHECKED BY THE CONTRACTOR FOR ACCURACY PRIOR TO CONSTRUCTION AND ANY DISCREPANCIES REPORTED TO THE ENGINEER.
13. ALL SERVICES TO MEET ALL REQUIREMENTS OF THE ONTARIO BUILDING CODE PART 7 CURRENT EDITION

LOCATES AND LIABILITY

1. THE CONTRACTOR SHALL RECTIFY ALL DISTURBED AREAS TO THE ORIGINAL CONDITION OR BETTER AND TO THE SATISFACTION OF THE TOWN
2. THE LOCATION OF ALL UNDER/ABOVE GROUND UTILITIES AND STRUCTURES ARE APPROXIMATE ONLY, AND WHERE SHOWN ON THE DRAWING(S) THE ACCURACY OF THE LOCATION OF SUCH UTILITIES ARE NOT GUARANTEED THE CONTRACTOR SHALL DETERMINE THE LOCATION OF ALL SUCH UTILITIES AND STRUCTURES BY CONSULTING THE APPROPRIATE AUTHORITIES OR UTILITY COMPANIES CONCERNED. THE CONTRACTORS SHALL PROVE THE LOCATION OF ALL SUCH UTILITIES AND STRUCTURES AND SHALL ASSUME ALL LIABILITY FOR DAMAGE OR RESTORATION TO SAME.
3. THE OWNER SHALL BE NOTIFIED IMMEDIATELY OF ANY CONFLICTS WITH EXISTING SERVICES.
4. ANY UTILITY WHICH CONFLICTS WITH THE CONSTRUCTION IS TO BE RELOCATED BY THE PROPER AUTHORITY AT THE OWNER'S EXPENSE.

CONSTRUCTION RESPONSIBILITIES

1. LOCATION OF EXISTING UTILITIES SHOWN AND ALL OTHER EXISTING UTILITIES TO BE ESTABLISHED BY CONTRACTOR IN THE FIELD. THE CONTRACTOR HAVING UNCOVERED ANY UTILITIES THAT ARE NOT SHOWN ON THE PLAN OR STAKED OUT BY BELL, HYDRO, CABLE & GAS UTILITY COMPANIES WILL IMMEDIATELY ADVISE THE ENGINEER FOR APPROPRIATE ACTION. THE CONTRACTOR IS RESPONSIBLE FOR TRACING AND IDENTIFYING ALL EXISTING PRIVATE UTILITIES WTHIN THE WORK AREAS.
2. THE CONTRACTOR(S) SHALL BE SOLELY RESPONSIBLE FOR LOCATING, SUPPORTING AND PROTECTING ALL UTILITIES AND STRUCTURES EXISTING AT THE TIME OF CONSTRUCTION IN THE AREA OF HIS WORK, WHETHER SHOWN ON THE PLANS OR NOT, AND FOR ALL REPAIRS AND CONSEQUENCES RESULTING FROM DAMAGE TO SAME.
3. TWO LANES OF TRAFFIC ARE TO BE MAINTAINED AT ALL TIMES DURING THE PERFORMANCE OF THE WORK ON SIXTH LINE. THE CONTRACTOR SHALL ADVISE THE TOWN OF OAKVILLE IN WRITING NOT LESS THAN 48 HRS IN ADVANCE OF START OF CONSTRUCTION AND SHALL ACQUIRE THE APPROPRIATE PARTIAL ROAD CLOSURE PERMITS AS NECESSARY.
4. ALL EXISTING PAVEMENTS, CURBS, SIDEWALKS, DRIVEWAYS AND SODDED BOULEVARD AREAS DISTURBED BY THE WORK ARE TO BE REINSTATED EQUAL TO EXISTING AND TO THE SATISFACTORY OF THE TOWN OF OAKVILLE.
5. NEW MANHOLES AND VALVE BOXES, EXISTING VALVE AND CHAMBERS, HYDRANT AND BELL PEDESTALS AND UTILITIES TO BE SET TO FINAL BOULEVARD AND PAVEMENT GRADES.
6. THE CONTRACTOR SHALL NOTIFY IN ADVANCE, AS REQUIRED, THE APPROPRIATE AUTHORITY HAVING JURISDICTION FOR THE ROAD PRIOR TO COMMENCING ANY WORK AND SHALL ACQUIRE AND SATISFY THE REQUIREMENTS OF THE APPROPRIATE PERMITS (FEES, INSPECTIONS, SIGNAGE, TRAFFIC MAINTENANCE, DIVERSION, ETC) FROM THE AUTHORITY.
7. THE CONTRACTOR SHALL SUPPLY AND PLACE TRAFFIC SIGNAGE IN CONFORMANCE WITH THE MTO MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES PRIOR TO COMMENCING ANY WITHIN THE MUNICIPAL ROAD/LANE ALLOWANCE.

SANITARY SEWERS

1. SANITARY SEWERS SHALL BE PVC. PVC PIPE IS TO BE BELL AND SPIGOT AND COMPLY TO ASTM D-3034 WITH MINIMUM SDR 35.
2. MINIMUM BEDDING REQUIREMENTS FOR ALL SANITARY SEWER MAINS AND RELATED CONNECTIONS IN A SINGLE TRENCH SHALL BE CLASS B GRANULAR BEDDING AS PER OPSD 802.010 UNLESS OTHERWISE NOTED.
3. SANITARY SEWER MANHOLES FRAME AND COVER AS PER OPSD 401.01.
4. ALL PVC LATERALS TO BE SDR 28 AND SHALL BE ANY COLOUR EXCEPT WHITE. MINIMUM SLOPE OF LATERAL TO BE 2.0%.
5. SINGLE SERVICE CONNECTIONS TO BE MINIMUM 150mm DIA PIPE.
6. TAPPING AT EXISTING SANITARY SEWERS SHALL BE UNDERTAKEN IN ACCORDANCE WITH REGION OF HALTON REQUIREMENTS.
7. ALL SEWERS TO BE VIDEO INSPECTED.
8. ALL SEWERS TO BE FLUSHED PRIOR TO VIDEO INSPECTION.
9. ALL PVC SEWERS ARE TO BE TESTED FOR DEFLECTION (MANDREL PASSAGE) AFTER INSTALLATION. SANITARY SEWERS SHALL ALSO BE TESTED FOR LEAKAGE (LOW AIR PRESSURE). PRIOR TO ASSUMPTION BY THE TOWN, PIPE DEFLECTION TESTING SHALL BE REPEATED.

STORM SEWERS

1. ALL PIPES GREATER THAN 375mm DIA SHALL BE STEEL REINFORCED CONCRETE AND SHALL CONFORM TO OPSS 1820 MATERIAL SPECIFICATION.
2. ALL SEWER PIPE UP TO AND INCLUDING 375mm DIA SHALL BE PVC, BELL AND SPIGOT AND SHALL COMPLY TO ASTM D-3034 WITH MINIMUM SDR 35.
3. MINIMUM BEDDING REQUIREMTNS FOR ALL SINGLE STORM SEWER MAINS AND ALL RELATED CONNECTIONS SHALL BE HIGH PERFORMANCE CLEAR STONE (HL-8 GRADED) AS PER TOWN OF OAKVILLE STANDARD DRAWING S-188.
4. STORM SEWER MANHOLES SHALL BE IN ACCORANCE WITH OPSD 701.010 AND 703.010. FRAME AND COVER AS PER OPSD 401.01 TYPE A. FRAMES TO BE STAMPED "DANGER" AND "STORM".
5. MANHOLE TOPS SHALL BE INITIALLY SET TO BASE COURSE ASPHALT ELEVATION AND ADJUSTED TO GRADE PRIOR TO PLACEMENT OF TOP LIFT OF ASPHALT.
6. ALL TRENCH EXCAVATIONS ARE TO BE BACKFILLED WITH SELECT NATIVE MATERIAL PLACED IN MAXIMUM 200mm LIFT THICKNESS WITHIN 3% OF THE OPTIMUM MOISTURE CONTENT AND COMPACTED TO A MINIMUM OF 95% SPD, UNLESS OTHERWISE SPECIFIED.
7. ALL SEWERS TO BE VIDEO INSPECTED.
8. ALL SEWERS TO BE FLUSHED PRIOR TO VIDEO INSPECTION.
9. ALL PVC SEWERS ARE TO BE TESTED FOR DEFLECTION (MANDREL PASSAGE) AFTER INSTALLATION. PRIOR TO ASSUMPTION BY THE CITY, PIPE DEFLECTION TESTING SHALL BE REPEATED.

WATERMAINS

1. FLEXIBLE WATERMAIN PIPE UP TO 300mm DIAMETER TO BE PVC DR-18 AND CONFORM TO A.W.W.A. C-900 WITH MECHANICAL JOINTS AS PER A.W.W.A. C-110, AND TO BE INSTALLED WITH A 10 GAUGE TRACER WIRE.
2. FLEXIBLE PIPE BEDDING TO BE OPSD 802.010 WITH COMPACTED GRANULAR B MATERIAL.
3. MINIMUM COVER TO BE 1.7m TO TOP OF PIPE.
4. DEFLECTION AT JOINTS NOT TO EXCEED 2.5 DEGREES AND SHALL BE EQUAL AT ALL JOINTS.
5. GATE VALVES AND BOXES FOR 150mm DIAMETER WATERMAINS AS PER A.W.W.A. STANDARD C-500 AND ARE TO OPEN TO THE LEFT (COUNTER CLOCKWISE).
6. HYDRANTS SHALL MEET THE REQUIREMENTS OF A.W.W.A. STANDARD C-502 AND SHALL BE SET IN ACCORDANCE WITH REGION OF HALTON, AND TOWN OF OAKVILLE BUILDING DEPARTMENT STANDARDS, COMPLETE WITH STEAMER CONNECTIONS. THE 100mm STEAMER PORT SHALL FACE THE FIRE ROUTE AND SHALL BE UNOBSTRUCTED BY ANY PROPOSED LANDSCAPING.
7. ALL FITTINGS TO HAVE MECHANICAL RESTRAINTS THAT MEET UNI-B-13-92.
8. ALL TEMPORARY AND PERMANENT WATERMAIN PLUGS ARE TO BE CONSTRUCTED IN ACCORDANCE WITH OPSD 1103.01.
9. TAPPING AT EXISTING WATERMAINS SHALL BE UNDERTAKEN IN ACCORDANCE WITH REGION OF HALTON REQUIREMENTS.
10. ALL WATER CUSTOMERS SUPPLIED BY A WATERMAIN TO BE SHUT DOWN SHALL BE NOTIFIED BY THE CONTRACTOR AT LEAST 48 HOURS IN ADVANCE OF THE SHUT DOWN AS PER REGION OF HALTON SPECIFICATIONS. NOTIFICATION SHALL TAKE PLACE UNDER THE ENGINEER'S DIRECTION.
11. MINIMUM HORIZONTAL SEPARATION BETWEEN WATERMAINS (INCLUDING PRIVATE SERVICES) AND STORM AND SANITARY SEWERS SHALL BE 2.5m. WATERMAINS MUST HAVE A MINIMUM VERTICAL CLEARNACE OF 150mm OVER AND 500mm UNDER SEWERS AND ALL OTHER UTILITIES WHEN CROSSING.

PRELIMINARY SITE SERVICING AND GRADING PLAN

FIGURE 2

1295 SIXTH LINE
TOWN OF OAKVILLE

PROJECT NUMBER: ALL-23015173-A0

DATE: JANUARY 2024

4. Water Servicing

Available record drawings show that there is an existing 300 mm diameter watermain located on Sixth Line adjacent to the site, where the site is located within the Region of Halton's Pressure Zone 02. The Town's record drawing for Sixth Line shows that the site is currently serviced through an existing water service connection to the existing 300mm diameter watermain at the southwest of the site. EXP staff then reviewed Town record drawing and confirmed through available images that there is an existing municipal fire hydrant north of the site on Sixth Line. Refer to Appendix A for the Sixth Line record drawing and Appendix B for the Region Water Operating Map.

The Owner's site plan includes one building which is to be constructed under a single phase of construction. Therefore, the water servicing design proposes the following watermain configuration:

- A new private fire service connection to the existing 300 mm diameter watermain on Sixth Line; and,
- A new private domestic service connection to the existing 300 mm diameter watermain on Sixth Line.

The future building plumbing designs are to be coordinated to ensure the proposed FDC connections are within 45 m of the existing fire hydrant in vicinity of the site as per OBC requirements. For additional details regarding the water servicing design refer to the Preliminary Site Servicing and Grading Plan on Figure 2.

To determine the post development domestic water demand on the municipal watermain, the water consumption calculations were prepared in accordance to the Region of Halton criteria. The calculations show that under maximum day conditions, a proposed demand of 1.6 L/s should be considered for the site. Then using the Fire Underwriter's Survey, a fire demand was calculated to be in the range of 183.0 L/s, giving a maximum day plus fire demand of 184.6 L/s to be used for the purposes of reviewing required fire protection measures. For additional details on the proposed water demand refer to calculations provided in Appendix B.

To verify existing flows and pressures within the municipal watermain against proposed demands, it is recommended that a hydrant flow test be completed for the site once the weather permit and any required fire protection measures or building construction be confirmed with the Architect upon the receipt of the flow test results.

5. Sanitary Servicing

Available record drawings show that there is an existing 300 mm diameter sanitary sewer on Sixth Line which flows in the southerly direction. The Town's record drawing shows that an existing sanitary service connection has been provided to the property line adjacent to the site. Refer to Appendix A for the Town's record drawing and Appendix C for the Region Wastewater Operating Map.

The Owner's site plan includes one building which is to be constructed under a single phase of construction. Therefore, the sanitary servicing design proposes the following sanitary configuration:

- One (1) new private sanitary service to the existing 300 mm diameter sanitary sewer on Sixth Line.

After reviewing the conceptual site plan and proposed servicing strategy it was not recommended that the existing sanitary service lateral be reused. Therefore, the existing sanitary lateral is to be decommissioned as per Region of Halton Standards. For calculating the peak sanitary demand for the proposed development, the Region of Halton Criteria and a typical bedroom breakdown equivalent population was used. Based on the Preliminary Site Plan and statistics the total estimated equivalent population for the site was calculated to be approximately 123 persons. After determining the equivalent population the Region of Halton's sanitary demand criteria and corresponding peaking factors were used to give a peak sanitary demand of 1.7 L/s including infiltration. Refer to Appendix C for sanitary calculations.

Downstream Sanitary Analysis

Once the sanitary calculations showed a post development increase for the site, EXP Staff reached out to Region Staff to discuss available sanitary capacity within the existing infrastructure. EXP staff held a meeting with Region Staff on January 10th, 2024 to reviewed the sanitary capacity allowances for the site. Through the meeting it was agreed that EXP would conduct a Sanitary Downstream Analysis of the sanitary catchment to an agreed upon termination point. Record drawings obtained from Town and Region staff show a sanitary catchment with a catchment area of 23.85 ha and corresponding equivalent population of 2,164 persons.

The results of the analysis show that under dry weather conditions there additional flows from the development increase the full flow capacity of the most critical section of the sanitary spine by 1.4% where no surcharging is expected and all flow remains within the sewer below the Reigion's 80% flowing full standards. Under extreme wet weather conditions the analysis shows that the most critical section of the sanitary sewer sees an additional increase in the full flow capacity of approximately 1.3%.

The analysis shows that under dry weather conditions the proposed development increases the full flow capacity of the most critical section of the sanitary spine by 1.4%. In a similar way, under extreme wet weather conditions the most critical section of the sanitary sewer saw an additional increase of 1.3%. Therefore, the slight increase on the sanitary demand can be accommodated within the Region sanitary sewer system without any surcharging and below the Region's 80% flowing full standards. See the sanitary catchment plan and downstream sanitary capacity calculations located in Appendix D for reference.

6. Storm Servicing

Record Drawings from the Town of Oakville and the Region of Halton show the following existing stormwater sewers in the vicinity of the site.

- 525mm diameter storm sewer flowing in a southerly direction down Sixth Line.

Town's record drawings do not identify that any existing storm service connection have been provided to the property line. Refer to Appendix A for Town's Record Drawings. Through EXP staff's analysis of the existing elevations, it is believed that the drainage from the site is captured by existing catchbasins on Sixth Line and conveyed south thought the 525mm diameter storm sewer.

After reviewing the Owner's conceptual site plan, it has been confirmed that the development is to one building with one level of underground parking, it was confirmed that a new storm service connection would be required to the existing 525mm diameter storm sewer on Sixth Line. The proposed SWM strategy also includes an underground SWM cistern positioned in the underground parking level to meet the required SWM quantity control requirements. The above mentioned SWM cistern will also incorporate a oil and grit filtration system to meet the sites SWM quality control requirements. For additional details regarding the storm servicing design refer to the Preliminary Site Servicing and Grading Plan on Figure 2. The proposed SWM measures are outlined further in the SWM report prepared by EXP.

7. Groundwater

After reviewing the Owner's Preliminary Site Plan it was noted that the plan is to incorporate one level of underground parking to service the parking needs of the proposed development. EXP staff reviewed the Town of Oakville's standards and recommend that a hydrogeological investigation be conducted as part of the detailed design process. Once completed, EXP Staff will review the findings of the investigation and provide a groundwater management strategy that is in accordance with the Town of Oakville Standards. It is noted that as per the Town Standards and the notes provided within the site's pre-consultation meeting that the Town of Oakville does not support the permanent dewatering of underground parking structures into municipal infrastructure.

8. Utilities

Through correspondence with the active utility agencies in the area, all the required utilities are located within the Sixth Line right-of-way adjacent to the site. Based on the nature of the proposed development and estimated load demands, utility staff have not indicated any issues with providing the necessary utility service for the development to date.

9. Conclusions

In summary, our findings outlined in this FSR report demonstrate that the proposed development can be adequately serviced where the results can be summarized as follows:

- Water servicing can be provided with new fire and domestic water service connections to the existing 300 mm diameter watermain located on Sixth Line
- Adequate fire protection can be provided based on the proposed building design where a hydrant flow test is recommended once weather permits
- Sanitary servicing can be provided with a new sanitary service connection to the existing 300 mm diameter sanitary sewer on Sixth Line
- Sanitary capacity is available within the existing municipal sanitary system based on the findings from the downstream sanitary capacity analysis completed by EXP
- Storm servicing can be provided with a new storm service connection to existing 525 mm diameter storm sewer on Sixth Line
- Stormwater management requirements can be met with the proposed SWM control measures outlined in the SWM Report prepared by EXP
- Groundwater can be adequately managed in accordance to Town of Oakville standards where a hydrogeological investigation is recommended as part of the detailed process

Sincerely,

EXP Services Inc.

Domestic Water Demand Calculations

PROJECT: **1295 Sixth Line**
PROJECT No: **ALL-23015173-A0**
CREATED BY: **N.M**
CHECKED BY **S.P**

Average Day

Halton Water Wastewater Linear Design Manual - Design Factors page 5

Per Capita Demand = 275 L/caps/d 0.00318287 L/cap/s

Type of Development	**Population Density**	
Bedroom Breakdown	123	Person/ha
Area	0.38	ha
Population total =	123	People

1 **Average Day Demand = 0.39 L/s**

Halton Water Wastewater Linear Design Manual - Max Daily Demand Peaking Factor page 5

Maximum Daily Demand Peaking Factor	4

2 **Max Daily Demand 1.57 L/s**

3	**Max Daily Demand**	**1.57**	**L/s**

Fire Flow Calculation

PROJECT: **1295 Sixth Line**
PROJECT No: **ALL-23015173-A0**
CREATED BY: **N.M**
CHECKED BY **S.P**

Fire Underwriters Survey 2010

1 **Estimate of the required fire flow for a given area can be determined by the formula:** $F = 220C\sqrt{A}$

Where F = required fire flow in litres/minute
C = coefficient related to the type of construction
A = total floor area in square meters

For Ordinary construction: C =	1	
Total area : A =	6,160	m²

Therefore F = 220 x 1.0 x (4405)½ =	**17,267**	**L/m**

Fire Underwriters Survey 2010

2 **Reduction for fire hazard**

Non-combustible	25%	
	12,950.56	**L/m**

3 **Reduction for Sprinkler protection**

Sprinkler	30%	
Fully Supervised system	10%	
	5,180	**L/m**

4 **Addition for Structures exposed within 45m**

3.1m to 10m	20%	
	2,590	**L/m**

5 **Total Estimated Fire flow** **10,360** **L/m**

The estimated fire flow is approx.	**11,000**	**L/m**
	183	**L/s**
